REPORT

TO

HIS EXCELLENCY ROBERT OFFLEY ASHBURTON, BARON HOUGHTON,

&c., &c., &c.,

LORD LIEUTENANT-GENERAL AND GENERAL GOVERNOR OF IRELAND.

MAY IT PLEASE YOUR EXCELLENCY,—

I have the honour to submit, for your Excellency's consideration, the Thirty-first Annual Report on Marriages, Births, and Deaths in Ireland.

GENERAL SUMMARY.

The Marriages registered in Ireland during the year 1894 number 21,602; the Births 105,354; and the Deaths 83,528. The marriage rate was somewhat above the average for the preceding ten years, the birth rate showed a small decline and the death rate a slight increase.

The recorded natural increase of population, or excess of births over deaths, was 21,826: the loss by emigration amounted to 35,895; there would thus appear to have been a decrease of 14,069 in the population during the year, but against a portion of this decrease there is a set-off in immigration, of which no official record has been obtained. The estimated population in the middle of the year was 4,600,599.

TABLE I.—Showing for each of the years 1884–94, the estimated **Population**; the number of **Marriages**, **Births**, and **Deaths** registered, and the number of **Emigrants** enumerated, with the rates per 1,000 of the estimated Population represented thereby; and the averages for the ten years 1884–93.

YEARS.	*Estimated Population in the middle of each year.	Numbers *Registered*.			Number of Emigrants as returned by the Enumerators.	Rate per 1,000 of Estimated Population.

* See page 191.

There are 2,621 Local Registration Officers holding office directly under the Department or who have entered into bonds with the Registrar-General for the due discharge of their duties. During the year 1894, 532 cases of vacancies or appointments were dealt with.

I append a table showing the number of Searches made, and Certificates issued at the General Register Office; also the amount received as fees for same, since the commencement of the Acts for the Registration of Births and Deaths and of Roman Catholic Marriages in 1864.

TABLE II.—NUMBER of SEARCHES made; number of CERTIFICATES issued, and Amount received as FEES for SEARCHES, &c., at the GENERAL REGISTER OFFICE, DUBLIN, during the 31 years 1864–94.

During the financial year ended 31st March last 774 cases were reported of offences against the Acts administered by this Department. On careful inquiry into the circumstances, in 173 cases prosecutions were ordered to be instituted against the offenders. In 94 of these the parties were convicted and punished; in 66 the proceedings were abandoned, the parties (in most instances) paying the costs of court and complying with the law; and in 8 cases the summonses were dismissed, while in 5 cases the result has not as yet been reported to this Office.

The cases dealt with included the following offences:—Neglect to register Births, neglect to register Deaths, neglect to furnish Certificate of Marriage, failure of Coroner to furnish Certificate of Inquest; giving false information as to age at death, as to cause of death, and as to duration of illness previous to death; giving false information as to Births, viz.—registering illegitimate children as legitimate, and misrepresenting date of birth; neglect of Medical Practitioner to furnish Certificate of Cause of Death; neglect to furnish burial notifications.

The administration of the legal work of the office is, as mentioned in previous Reports, entrusted to Mr. Matheson, whose detailed statement of the business transacted will be found at page 196.

MARRIAGES.

The number of Marriages registered during the year is 21,602, being equal to 1 in every 213, or 4·70 per 1,000, of the estimated population,* a rate which is equal to that for the previous year, and ·26 above the average for the ten years 1884–93.

Of the 21,602 Marriages registered during the year 1894, 14,795 were between Roman Catholics; 3,582 were celebrated according to the rites and ceremonies of the Church of Ireland; 2,373 were in Presbyterian Meeting-houses; 470 in "Registered Buildings" belonging to various religious denominations; only 362 by civil contract in the Registrars' offices; 8 were according to the usages of the Society of Friends; and 12 according to the Jewish rites.

The Roman Catholic Marriages are equal to a rate of 4·27 per 1,000 of the estimated number of Roman Catholics, and the other Marriages represent a rate of 6·01 per 1,000 of all persons other than Roman Catholics in the population.

Of the 3,582 Marriages according to the rites of the Church of Ireland, 54 were by special licence, 3,027 by licence, 461 after the publication of banns, 14 on Registrar's certificate, and in 26 instances there was no information afforded as to which of these methods was adopted.

* Throughout this Report the rates for the total of Ireland are based on the estimated population in the middle of the respective years, and the rates for Provinces and Counties are based on the population according to the Census, those relating to the years 1885–6 being founded on the 1881 population, and those having reference to the years 1887–94 on the population by the Census of 1891.

TABLE IV.—**Marriages** registered in Ireland in 1894 and each of the previous ten years, according to the **modes of celebration**; with the **rate** per 1,000 of the population represented:—

During the year 1894 there were issued by the Registrars 716 Licences for Marriage in Registered Buildings and in the Registrars' offices.

The number of Marriage Licences issued by the licensing Ministers of the several Presbyterian bodies is given in the following summary:—

Presbytery or Synod.	Number of Licensing Ministers on 31st December, 1894.	Number of Registered Meeting-houses on 31st December, 1894.	Number of Licences issued.
1. General Assembly of the Presbyterian Church in Ireland, ...	146	573	2,207
2. Remonstrant Synod of Ulster, ...	8	19	35
3. Presbytery of Antrim, ...	5	10	15
4. United Presbytery or Synod of Munster, ...	2	2	.
Total, ...	161	604	2,257

There being no civil restrictions as to the time or place for celebrating marriages between Roman Catholics in Ireland, a registration of the churches and chapels of the Roman Catholic Church is not necessary for the purposes of this office; but with reference to other religious bodies, a record is kept of the places of Divine worship in which marriages may lawfully be solemnized without special licence, and from this it appears that, on the 31st December, 1894, there were 1,487 churches and chapels of the Church of Ireland, 604 registered Presbyterian Meeting-houses, and 379 "Registered Buildings" belonging to various religious denominations. Compared with the previous year, these numbers show a decrease of 2 as regards the Church of Ireland, a decrease of 2 in the number of Presbyterian Meeting-houses, and an increase of 10 "Registered Buildings."

The following statement shows the several religious bodies having "Registered Buildings" in 1894:—

Denominations.	No. of Places of Worship.	Denominations.	No. of Places of Worship.	Denominations.	No. of Places of Worship.
Methodists, . . .	222	Moravians, or United Brethren,	9	Covenanters, . . .	1
Reformed Presbyterians, .	37	Methodists, New Connexion,	7	Welsh Presbyterians, . .	1
Independents, . . .	25	Jews, ...	3	United Original Seceders, .	1
Baptists, . . .	23	Evangelical Union, . .	2	"Protestant Dissenters," . .	1
Christian Brethren, . .	13	"The Catholic Apostolic Church," . . .	2	Non-Subscribing Christians, .	1
Seceders, ...	10	Non-Subscribing Unitarians,	1	Independent Protestants, . .	1
United Presbyterians, .	9	Unitarians, ...	1	Total, . .	379
Salvation Army, . .	9				

Of the 21,602 marriages registered during the year 1894 there were recorded—in the first quarter 6,068; in the second, 5,301; in the third, 5,128; and in the last, 5,105.

The marriages of bachelors and spinsters constitute 86·5 per cent. of the total; those of widowers and spinsters 8·6 per cent.; of bachelors and widows 2·8 per cent.; and of widowers and widows 2·1 per cent. Thus, 10·7 per cent. of the men married were widowers, and 4·9 per cent. of the women were widows; and in 14 instances in every 100 marriages one or both of the contracting parties had been in the married state before.

TABLE V.—Showing by QUARTERLY PERIODS, the number of MARRIAGES registered in Ireland in each of the eleven years 1884–94, and the average number for the ten years 1884–93, distinguishing the number of Roman Catholic marriages registered under the 26 & 27 Vic., cap. 90, and of Protestant and other marriages under the 7 & 8 Vic., cap. 81:—

A complete registry of the exact ages of the persons married would be valuable from many points of view: hence it is matter for regret that in the great majority of instances the ages are not recorded. The requirements of the law are technically complied with by the entry in the age column of "minor" or of "full age," as the case may be, and there seems to be a general and increasing inclination to take advantage of this circumstance, as in 1894 the ages of both parties were specified in 4,382 cases only, being little more than one-fifth of the total number of marriages. In the year 1865, when 30,802 marriages were registered, the ages of both parties were given in 13,910 instances.

Of 21,602 men married during the year, 417, or 1·93 per cent., were minors; and of the women married, 1,975, or 9·14 per cent., were under age.

The highest proportion of husbands (2·26 per cent.) married under age in 1894, was in the province of Leinster, and in that province there was also the highest per-centage of wives (10·10), not of full age.

It may be added that the per-centage of persons married in Ireland who were under age is very far below the corresponding rates in England and Scotland.

The signatures of the contracting parties in the marriage registers or certificate, afford a rough test of the progress of elementary education. In the year 1894, 17,912, or 82·9 per cent., of the husbands, and 18,039, or 83·5 per cent., of the wives, wrote their names, and the remainder signed by marks.

These figures contrast hopefully with the corresponding results eleven years since, the per-centage of persons married in 1884 who wrote their names being—men 75·3, and women 71·9.

The per-centages for the several provinces last year range, for men, from 75 in Connaught to 86 in Munster, and, for women, from 79 in Connaught to 87 in Leinster and Munster.

In 1,739 cases, both of the parties married signed the register by "mark," and in 3,775 the register was thus signed by either the husband or the wife, so that in 5,514 cases, or 25·5 per cent. of the total number of marriages, one or both of the parties signed by mark; and in 16,088, or 74·5 per cent., *both* parties wrote their names.

The number of marriages registered in each of the eleven years 1884–94; the proportion per cent. of persons married who wrote their names in the registers; of minors, of widowers, and of widows are given in the following Table for Ireland, and for each of the four provinces.

TABLE VI.—Showing as regards the **Marriages** in Ireland and in each of the Four Provinces during the years 1884–94, the proportion per cent. of Persons who **signed their Names,** of Persons **not of Full Age,** and of **Re-marriages.** The figures for the year 1884 refer to Registration Provinces; those for 1885–94 to the Provinces Proper.

	1894,	74·7	78·6	1·52	8·75	9·93	4·82

In proportion to population at all ages, the registered marriages were most numerous in the province of Ulster, in which, however, the rate was only 5·3 per 1,000 of the population, according to the Census of 1891; Leinster comes next, with 5·1 per 1,000; Munster third, with 3·9 per 1,000; and Connaught last, the rate being 3·3 per 1,000.

The highest rate for any county was 7·5 per 1,000 of the population in 1891, which was the marriage rate for Antrim; and the lowest 2·8 per 1,000, for Roscommon. Between these, the most favourable were 7·0 for Dublin, and 5·4 for Down; and the least so 2·9 for Clare, and 3·2 for Sligo.

BIRTHS.

The number of births registered during the year 1894 was 105,354—53,922 boys and 51,432 girls, or 104·8 of the former to every 100 of the latter—the rate afforded in proportion to the estimated population being 1 in 43·7, or 22·9 per thousand, which is 0·1 under the average rate per 1,000 for the ten years, 1884–93.

Of the 105,354 children whose births were registered in Ireland during the year 1894, 102,470, or 97·3 per cent. were legitimate, and 2,884, or 2·7 per cent., were illegitimate: the average per-centage of illegitimate for the preceding 10 years also was 2·7. It is unnecessary to say that these results compare very favourably with the returns for most other countries.

Of the children born in wedlock during the year, 52,463 were males, and 50,007 females, being 104·9 of the former to every 100 of the latter, and of the illegitimate children 1,459 were males, and 1,425 females, or 102·4 boys to 100 girls.

Comparing the provinces, we find that the per-centage of children born in Ulster, who were illegitimate, was 3·9; in Leinster, 2·7; in Munster, 2·2; and in Connaught, 0·7.

TABLE VII.—The Per-centage of **Legitimate** and of **Illegitimate** Births registered in Ireland during the years 1890–94, by Provinces.

Provinces.	Proportion per cent. of Legitimate Births.					Proportion per cent. of Illegitimate Births.				
	1890.	1891.	1892.	1893.	1894.	1890.	1891.	1892.	1893.	1894.

LEINSTER, . . .	97·5	97·6	97·8	97·5	97·3	2·5	2·4	2·2	2·5	2·7
MUNSTER, . . .	97·8	97·8	98·0	97·8	97·8	2·2	2·2	2·0	2·2	2·2
ULSTER, ...	96·0	96·0	96·1	96·3	96·1	4·0	4·0	3·9	3·7	3·9
CONNAUGHT, . . .	99·2	99·3	99·5	99·3	99·3	0·8	0·7	0·5	0·7	0·7

The respective total birth-rates for the provinces in 1894 were—Leinster, 22·5 per 1,000 of the population in 1891; Munster, 21·5; Ulster, 23·8; and Connaught, 20·5.

The four counties having the highest rates are Antrim, 29·5 per 1,000 of the population in 1891; Dublin, 27·6; Down, 26·7; and Kerry, 22·8. Those with the lowest rates are—Fermanagh, 17·8; Meath, 18·3; Monaghan, 18·4; and Roscommon, 18·5.

Of the total births, 52·7 per cent. were registered in the first six months of the year (181 days), and 47·3 per cent. in the second half of the year (184 days).

The number registered in the first quarter was 27,830 ; in the second, 27,662 ; in the third, 24,802 ; and in the fourth, 25,060.

DEATHS.

The deaths registered during the year amount to 83,528, being equal to 1 in 55·1 or 18·2 per 1,000 of the estimated population. The deaths of males number 41,377, and those of females 42,151, the former being equal to 18·2 in every 1,000 males living, and the latter representing 18·1 per 1,000 females.

The death-rate (18·2) is 0·1 over the average rate for the preceding ten years, and 0·3 over the rate for the year 1893.

As usual, very many of the Registrars furnished at the close of each quarter valuable notes on the sanitary condition of their respective districts. These notes were embodied in the Quarterly Returns issued from this department, and emanating as they did, from gentlemen qualified to speak decisively on the subject, it is to be hoped that they received the serious attention of the various Local Authorities intrusted with the administration of the Public Health Acts.

With respect to the death-rates for the four provinces, the rate for Connaught is only 14·8 ; that for Munster is 16·6 ; for Ulster, 18·3 ; and for Leinster, 20·1 per 1,000 of the population in 1891.

Of the thirty-two counties, the four having the lowest registered mortality are—Roscommon, 13·8 per 1,000 ; Donegal, 14·0 ; Kerry, 14·0 ; and Cavan, 14·2.

Those in which the rate was highest are—Dublin, 23·4; Antrim, 21·8; Carlow, 20·9 ; and Wexford, 20·8.

The deaths registered in the first half of the year generally outnumber those in the second. In 1894, 57·6 per cent. of the total deaths were registered in the six months, January to June inclusive, and 42·4 per cent. in the remaining six months of the year.

The annual rates represented by the deaths registered in each quarter are as follow:—First quarter, 23·3 per 1,000 of the population ; second, 18·6 ; third, 14·4 ; and fourth, 16·4. The rate for the first quarter is above, and those for the other quarters are below, the corresponding average rates for the respective quarters in the ten years, 1884–93.

From the Table on pp. 174–183 *it will be seen that, of the* 83,528 *deaths registered during the year,* 2,360 *took place in Infirmaries and General and Special Hospitals ;* 1,051 *in Public Lunatic Asylums;* 9,329 *in Workhouses and Workhouse Hospitals; and* 70,788 *were of persons who died "At their Own Homes, &c." As in former Reports a Table (see pages* 184–5) *is given showing like information for those Registrars' Districts in which the principal Urban Sanitary Districts in Ireland are situated.*

The deaths in "Infirmaries and General and Special Hospitals" constitute 2·8 per cent. of the total number, the per-centages for the four provinces varying from 0·5 in Connaught to 6·9 in Leinster. Over eleven per cent. of the deaths registered occurred in Workhouses or Workhouse Hospitals, the respective per-centages for the provinces being—Leinster, 13·2 ; Munster, 16·2 ; Ulster, 7·5 ; and Connaught, 7·7.

TABLE VIII.—Showing, by **Quarterly Periods**, the number of **Births** and **Deaths** registered in Ireland in each of the eleven years, 1884–94, and the average number for the ten years, 1884–93.

I.—SPECIFIC FEBRILE OR ZYMOTIC DISEASES.

The number of deaths from Specific Febrile or Zymotic diseases registered during the year 1894 was 8,947 (4,308 males and 4,639 females), or 194 in every 100,000 of the estimated population, being 3 over the number for the preceding year, and 969 above the average for the ten years, 1884-93.

Of the 8,947 deaths from zymotic diseases 4,528, or 50·6 per cent., were amongst children under 10 years of age.

Small-pox.—This disease which, during the ten years 1884–93, caused but 32 deaths in Ireland (only one of which occurred in the last year of that period, and none in the

See Note (*) on page 3.

year 1892) proved fatal last year in 72 cases, 70 of which were in the Dublin Registration District, one in Antrim Union, and one in Londonderry Union. Almost all of these deaths occurred during the latter half of the year. According to the Returns 24 of the 72 persons who died from small-pox had been vaccinated, 36 were unvaccinated, and in the remaining 12 cases there was no statement as to vaccination.

Measles.—The number of deaths from Measles which, after having fallen to 240 in the year 1891, was 1,183 in 1892, and 1,082 in 1893, rose last year to 1,215, being 294 or 32 per cent. over the average for the ten years 1884–93. More than 37 per cent. of the deaths from measles last year occurred in Belfast Union where the disease caused 456 deaths, a number equal to a rate of 1·6 per 1,000 of the population of the Union in 1891. In the Unions of Ballymena and Clones also the rate was over 1 per 1,000, there having been in the former Union 67 deaths, or 1·1 per 1,000 persons, and in the latter 20 or 1·1 per 1,000, and there are also a few Unions in which, although the rate represented did not amount to 1 per 1,000, deaths from measles were comparatively numerous. Among these are Coleraine with 25 deaths, Lisburn 42, Newtownards 26, and Cork 61. The total number for the province of Leinster is 108, for Munster 188, for Ulster 802 (or two-thirds of the gross number for Ireland), and for Connaught 117.

Scarlet Fever.—Deaths from Scarlet Fever have increased gradually from 308 in 1891 to 599 in 1894, but the latter number is 117 or 16 per cent. below the average for the ten years 1884–93, the disease having been very fatal in the earlier years of that decade. There are only 6 Unions in which the deaths from scarlet fever registered last year numbered 20 or upwards, these are :—Belfast, 43 deaths ; Dublin South, 34 ; Limerick, 34 ; Longford, 28 (equal to 1·1 per 1,000 of the population), New Ross, 40, or 1·2 per 1,000 ; and Waterford, 24. The total number for the province of Leinster is 228, for Munster, 113, for Ulster, 214, and for Connaught, 44.

Typhus.—Although there were a few more deaths from typhus during last year than in the year preceding, the mortality from the disease was much below the average, the number of deaths being 233, or 6 over that for 1893, and 147 below the average for the ten years 1884–93. There were only 35 deaths from this disease in the province of Leinster ; in Munster there were 95 (including 11 in Tralee Union) ; in Ulster, 48 ; and in Connaught, 55, including 12 (equal to a rate of 0·5 per 1,000 persons) in Ballinrobe Union.

Simple continued and ill-defined Fever.—The deaths tabulated under this heading number 161, being 22 over the number of the preceding year, but little more than one-half of the average (312) for the ten years 1884–93. Of the 161 deaths 42 occurred in Leinster, 70 in Munster (including 15 in Newcastle Union), 21 in Ulster, and 28 in Connaught, including 10 in Westport Union.

Enteric Fever.—Deaths from enteric fever, which had risen from 714 in the year 1892 to 919 for the following year, fell last year to 783, or 15 under the average for the ten years 1884–93, but allowing for the decrease in the population, the mortality was slightly above the average, the rate for last year being 17·0 per 100,000 living, and the average rate for the preceding ten years 16·7. The respective rates for the four provinces for last year are, Leinster 21·6 per 100,000 ; Munster 14·4 ; Ulster 18·9, and Connaught 7·0. Of the 257 deaths from enteric fever in Leinster, 151 (equal to 0·4 per 1,000 of the population) were in the Dublin Registration District ; and of the 306 deaths in Ulster, 165—equal to 0·6 per 1,000 of the population in 1891—occurred in Belfast Union. Compared with the numbers for the preceding year the deaths from enteric fever in the Dublin Registration District show a large decline and those for Belfast Union a small increase ; the deaths in the two areas combined constitute 40 per cent. of the total number from enteric fever in Ireland. Among the deaths from the disease in localities outside of Dublin and Belfast, may be noted 26 (equal to 0·6 per 1,000 living), in Tralee Union, where there were also 11 deaths from typhus ; 12 in Mountmellick Union, and 12 in Newtownards Union. One half of the total number of deaths from enteric fever occurred in persons aged between 15 and 35 years.

Whooping-cough.—Caused 1,242 deaths, or 27·0 per 100,000 of the population, being somewhat in excess of the mortality from this disease in either of the two years preceding, but slightly under the average for the ten years 1884–93. The

respective rates for the four provinces are—Leinster 34·2 per 100,000 of the population; Munster 9·0; Ulster 31·8; and Connaught 29·8. Of the 406 deaths from whooping cough in Leinster, 188 occurred in the Dublin Registration District; among the 105 in Munster are 29 in Cork Union; of the 515 in Ulster, 193 (equivalent to 0·7 per 1,000 of the population according to the Census of 1891) were in Belfast Union, 34 in the Union of Lisburn, and 30 in Lurgan Union; and the 216 in Connaught comprise 23 (equal to 0·8 per 1,000 of the population) in Claremorris Union, and 36 (equal to 0·7 per 1,000) in Swineford Union.

Diphtheria.—The number of deaths from Diphtheria is 381, being a decline of 30 as compared with the number for the preceding year, but 31 over the average for the ten years 1884–93. Of the 381 deaths, 266, or 70 per cent., occurred in the province of Ulster (including 75 in Belfast Union and 20 in the Union of Ballymena), 51 in the province of Leinster, 39 in Munster, and 25 in Connaught.

TABLE XI.—Showing for the year 1894 the Deaths from the several forms of **Fever** at each Age-Period, with the proportion to the number of the living at each Age represented thereby.

Erysipelas.—The number of deaths from erysipelas is 284, being 26 under the number for the preceding year, but 60 over the average for the ten years 1884–93.

Puerperal Fever.—The number of deaths from this disease is 454, being 146 over the average for the preceding ten years, and 70 over the number for the year 1893.

Influenza.—For the ten years 1864–73 (during the greater portion of which period there was not any epidemic outbreak of the disease), the average annual number of deaths from influenza registered in Ireland was 166, or 0·3 per 10,000 of the population, the yearly number ranging from 311 in 1864 to 96 in 1868; for the following ten years (1874–83) the average number was 82, the highest being 124 in 1875, and the lowest 39 in 1882; and for the six years, 1884–9, the average was 34 only, the numbers varying from 21 to 44. In 1890 the deaths from the disease amounted to 1,712, or 3·6 per 10,000 of the population; in the following year they fell to 891, or 1·9 in every 10,000 living; in the year 1892 they rose to 3,742, or 8·1 in every 10,000 of the population, and equal to 4·2 per cent. of the deaths from all causes; in 1893 they fell to 1,310, or 2·8 in every 10,000 of the population; and last year they again rose, the number for the year being 2,032, or 4·4 in every 10,000 of the estimated population. In the province of Leinster the influenza death-rate in 1894 was 4·4 per 10,000 of the population, according to the Census of 1891; in Munster, 4·2; in Ulster, 3·0; and in Connaught, 7·4. The county rates range from 1·3 per 10,000 in Fermanagh County to 10·3 in Mayo and 10·7 in Carlow.

The Table (XII.) on the opposite page shows, by Sexes and Age-Periods, the distribution of the deaths from influenza through the several counties.

[TABLE XII.

TABLE XII.—Showing, by Provinces and Counties, the number of Deaths from Influenza at each of five Age-Periods registered in Ireland during the year 1894, with the rate per 10,000 of the population* represented by the deaths at all ages.

* See Note on page 3.

Simple Cholera.—There were but 33 deaths ascribed to this disease, the average for the previous ten years being 72, and the number for the last year of that period 240. Of those recorded in 1894, 7 were in Leinster, a like number in Munster, 18 in Ulster, and one in Connaught.

Diarrhœa, Dysentery.—The number of deaths tabulated under this heading is 1,125, being a fall of 842, or 43 per cent., as compared with the number for the year 1893, and 303 under the average for the ten years 1884–93. The rate per 100,000 living represented by the deaths from these causes is 24·5, being 5·3 under the average rate for the preceding ten years. The respective rates for the four provinces are—Leinster, 25·8 per 100,000; Munster, 21·6; Ulster, 31·1; and Connaught, 8·4. Fifty-nine per cent. of the deaths under this heading in Leinster were in the Dublin Registration District, and 43 per cent. of those in Ulster occurred in the Union of Belfast, where the deaths from these causes were equal to 74·2 per 100,000 of the population according to the Census of 1891.

Two males died from *Hydrophobia.*

II.—Parasitic Diseases.

There were only 44 deaths from diseases of this class.

III.—Dietetic Diseases.

The number of deaths from dietetic diseases is 157, including 145 from intemperance, 39 of which (36 males and 3 females) were caused by delirium tremens, and 106 (82 males and 24 females) come under the head of chronic alcoholism. The number of deaths from intemperance registered in each of the two years, 1892 and 1893, was 155.

IV.—Constitutional Diseases.

From diseases termed "constitutional" there resulted 15,568 deaths (7,520 males and 8,048 females), affording a rate of 1 in 5·4 of all the deaths, and equal to 338 in every 100,000 of the population.

Phthisis or Pulmonary Consumption was slightly less fatal than usual, the number of deaths being 9,626 (4,599 males and 5,037 females), equal to 209·2 in every 100,000 persons, as compared with an average annual rate of 213·2 per 100,000 for the previous ten years.

As heretofore, Leinster and Ulster yield the highest rates, and Connaught the lowest. The rates for the four provinces are as follow:—Leinster, 236 per 100,000 of the population; Ulster, 217; Munster, 190; and Connaught, 149.

Of the 3,522 deaths from phthisis in Ulster, 1,056 occurred in Belfast union, this number being equal to 364 per 100,000 of the population according to the Census of 1891, and the 2,800 fatal cases of the disease in Leinster comprise 1,221, or 349 per 100,000 of the population, registered in the unions of Dublin North and Dublin South.

Of the total number of deaths from phthisis in Ireland, 7,412, or 77 per cent., were of persons aged 15 and under 45 years of age.

Mesenteric Disease.—The number of deaths from mesenteric disease is 958—526 males and 432 females.

Gout.—Only 28 deaths from gout were registered—20 males and 8 females.

Cancer.—There were 2,375 deaths (1,066 males and 1,309 females) tabulated under this heading, against an average of 2,091 for the ten years 1884–93.

The following Table shows, by Sexes and Age-periods, the deaths from Cancer registered during the year 1894, arranged according to the part of the body affected by the disease, in so far as that information was contained in the Returns; also the number of deaths to 100,000 of the living at same age. In 153 instances the organ or portion of the body affected was not stated. It will be observed from the Table that the deaths entered under the first ten headings therein, which relate to various parts of the head, neck, and throat, amount to 461, and that of these, 319, or more than two-thirds, were deaths of males. 532 of the classified cases were deaths from cancer of the stomach; 282 females died from cancer of the breast, and 166 females from cancer of the uterus. The Table shows also the total deaths from cancer in each of the ten years, 1884–93, arranged by Age-periods.

TABLE XIII.—DEATHS FROM CANCER.

V.—Developmental Diseases.

The deaths in this class amount to 16,892, of which 16,432 (7,047 males and 9,385 females), or 19·7 per cent. of the deaths from all causes, were ascribed to "old age." Of the remaining 460 deaths, 365 are tabulated under the head of "premature birth"; 19 were caused by atelectasis, 12 by cyanosis, 31 by spina bifida; &c.

VI.—Local Diseases.

The number of deaths from "local diseases" registered amounted to 34,503 (18,281 males and 16,222 females), or 41·3 per cent. of the deaths from all causes.

Diseases of the Nervous System.—From this group of diseases there resulted 7,343 deaths—3,886 males and 3,457 females. They include 2,327 from convulsions (nearly all children), 1,406 tabulated under the head of "hemiplegia, brain paralysis"; 194 under paraplegia and diseases of spinal cord; 1,175 from apoplexy; 874 from inflammation of the brain or its membranes; 334 from epilepsy; 376 from insanity (general paralysis of the insane); 13 (3 males and 10 females) from chorea or St. Vitus's dance; 223 from softening of the brain, &c.

Diseases of the Circulatory System.—Diseases of the circulatory system caused 6,106 deaths—3,040 males and 3,066 females.

*Diseases of the Respiratory System.**—The mortality from diseases of the respiratory system* shows a slight increase as compared with the return for the preceding year, but is below the average. The number of deaths from the diseases in this group is 14,139—7,760 males and 6,379 females—or 307·3 in every 100,000 of the population. In the preceding year 13,714 deaths from these causes were registered, and the average number for the ten years 1884–93 was 14,986, or 312·9 per 100,000 of the estimated mean population. The respective rates for the Provinces, in 1894, are—Leinster, 346 per 100,000 persons; Munster, 275; Ulster, 317; and Connaught, 230.

Of the 14,139 deaths from these causes 8,609 (4,588 males and 4,021 females), resulted from bronchitis, being 66 over the number from that disease in the preceding year, but 1,824 under the number for the year 1892; 3,727 (2,202 males and 1,525 females) were from pneumonia or inflammation of the lungs; 543 from croup; 330 from asthma and emphysema; 226 from pleurisy; 144 from laryngitis, &c.

Diseases of the Digestive System.—These diseases caused 4,047 deaths (2,116 males and 1,931 females), including 391 from enteritis or inflammation of the bowels; 427 from peritonitis or inflammation of the covering of the bowels; 399 from ileus or obstruction of the bowels; 131 from hernia; 10 (7 males and 3 females) from fistula; 259—173 males and 86 females, from cirrhosis of liver; &c.

Diseases of the Urinary System.—To the various affections of this order of diseases 1,549 deaths (1,054 males and 495 females) were ascribed. Of these deaths, 672 (405 males and 267 females) were from Bright's disease; 240 from acute nephritis or inflammation of the kidneys; 15 from ischuria or suppression of urine; 22 from stone in the bladder; 39 from uræmia, &c.

The remaining deaths from Local Diseases comprise 59 from *Diseases of the Lymphatic System and of Ductless Glands*; 571 from *Diseases of the Reproductive System* (including 159 from diseases of the Organs of Generation, and 412 from the Accidents of Childbirth); 414 from *Diseases of the Organs of Locomotion;* and 216 from *Diseases of the Integumentary System.*

VII.—Violent Deaths.

The number of violent deaths registered during the year is 1,920 (1,296 males and 624 females), or 41·7 in every 100,000 of the population, being slightly over the average rate for the ten years 1884–93. Accidents or negligence caused 1,731 of these deaths (including 339 from burns or scalds and 378 from drowning); there were 50 cases of homicide (murder and manslaughter), and 138 of suicide, and 1 man was executed.

Inquests.—There were 2,501 inquests reported to the Registrars during the year 1894, being 1 inquest to every 33 deaths registered.

AGES.

Deaths of infants under 1 year old numbered 10,703, being equal to 10·2 per cent. of the number of births registered.

Amongst children under 5 years of age 17,108 deaths occurred—a mortality equal to 37·3 in every 1,000 of the estimated number of the living at that age. Of these, 9,210 were boys and 7,898 girls; the former number representing 39·5 in every 1,000 boys, and the latter 34·9 in every 1,000 girls under 5 years old.

* Exclusive of Phthisis, or Pulmonary Consumption, for which see "Constitutional Diseases."

The deaths of persons aged 65 years and upwards are equivalent to 9·7 per cent. of the living at that age.

Among the deaths registered are 735 of persons stated to have been aged 95 years or upwards—362 males and 373 females; of these 166 (69 males and 97 females) were returned as having been 100 years or upwards. In the absence of public records for remote periods, absolute verification of the ages of very old persons is not obtainable, but secondary inquiries having been made as regards persons returned during some recent years as centenarians, it was found, in almost every instance, that, so far as the Registrars could ascertain, the age was correctly stated.

EMIGRATION.

According to the Returns obtained by the Royal Irish Constabulary and the Metropolitan Police, who acted as enumerators at the several Irish seaports, the number of emigrants (natives of Ireland), who left Ireland during the year 1894 was 35,895; of these 15,318 were males and 20,577 were females. Of the whole number, 4,916 were from the Province of Leinster; 16,299 from Munster; 6,242 from Ulster; and 8,438 from Connaught.

Of the total emigrants from Ireland in 1894, 7·9 per cent. were under 15 years of age; 83·1 per cent. were between 15 and 35 years old; 9·0 per cent. were 35 or upwards; and in 7 instances, the ages were not specified.

PRICES OF PROVISIONS, AND PAUPERISM.

The average price of the 4 lb. loaf in Dublin in the year 1894 was 4¾*d.*, being 1*d.* under the average price for the previous year.* Oatmeal (1st quality) averaged 14*s.* 8*d.* per cwt. in Dublin: the average price for 1893 was 15*s.* 1*d.*; the average prices of potatoes in Dublin ranged from 3*s.* to 4*s.* per cwt., against 2*s.* 4*d.* to 3*s.* 3*d.* in 1893; and those of beef from 44*s.* to 55*s.* per cwt., against 44*s.* to 57*s.* in 1893.

Table XIV.—Average Prices in Dublin of Bread, Oatmeal, Potatoes, and Beef, during the years 1884–94, and the Average Number of Persons in Ireland receiving In-Door and Out-door Relief on Saturdays in those years; also the Average Prices of Provisions and the Average Number of Persons in Receipt of Relief during each quarter of the year 1894.

* Prices for the years 1884–7, and the first two quarters of 1888, were derived from Returns furnished by Messrs. Manders & Co. those for the third and fourth quarters of 1888 and for the years 1889–94 from Returns received from "Bolands, Limited," and Messrs. Johnston & Co. (or Johnston, Mooney, and O'Brien, Limited)—the prices quoted for these two firms including delivery.

† Compiled from Returns furnished by the Local Government Board.

Surveying the period covered by several Tables in this Report, *i.e.*, 1894, and the ten years preceding, it is found that beef was lowest in the year 1887, when the average prices ranged from 44*s.* to 53*s.* 6*d.* per cwt.; oatmeal (1st quality), was cheapest in 1889, when the average price was 13*s.* 7*d.* per cwt.; and potatoes, in 1888, when the average range of prices was from 2*s.* 2*d.* to 2*s.* 9*d.* per cwt. The highest average price of oatmeal was 17*s.* 6*d.* in 1884 and 1885; the highest range for potatoes, 3*s.* 6*d.* to 4*s.* 2*d.* per cwt. in 1891, and for beef, 62*s.* 6*d.* to 72*s.* per cwt. in 1884.

From Returns, for which I am indebted to the Local Government Board, it appears that the average number of workhouse inmates in Ireland on Saturdays during the year 1894 was 42,263, being 427 over the average for the preceding year; and that the average number of persons receiving out-door relief was 57,256, or 645 under the corresponding number for 1893.

THE WEATHER.

The following particulars and those given on pages 22–46 and pages 186–187, which are inserted by the kind permission of the Editor of the Dublin Journal of Medical Science, have been derived from Returns of Meteorological Observations taken in Dublin City during the years 1874–94, by J. W. Moore, Esq., M.D., F.R.C.P.I., F.R.MET. SOC.; and published in the Journal during the years 1894–95. The Tables on pages 188–190 also, are founded on Dr. Moore's observations.

The mean Atmospherical Pressure has been obtained from daily readings of the barometer at 9 A.M. and 9 P.M., corrected and reduced to 32° Fahrenheit at the mean sea level. The Mean Temperature values have been deduced from the maximal and minimal readings of the thermometer in the shade. The Rainfall is that measured daily at 9 A.M. A *rainy day* is one on which at least one-hundredth (·01) of an inch of rain falls within the twenty-four hours from 9 A.M. to 9 A.M.

The *Mean Height of the Barometer* during the year 1894 was 29·915 inches. The highest observed reading was 30·805 inches at 4 P.M. on December 27th. The lowest observed reading was 28·591 inches, at 4 P.M. on October 24th. The extreme range of atmospherical pressure was 2·214 inches compared with 2·176 inches in 1893.

The *Mean Temperature* of the year, deduced from the arithmetical mean of the maximal and minimal readings of the thermometer in the shade was 50·1°. The highest reading was 75·7° on July 1st; the lowest reading was 18·6° on January 7th. The average mean temperature for the years 1874–93, calculated in the same way, was 48·7°. The mean temperature deduced from the daily readings of the dry bulb thermometer at 9 A.M. and 9 P.M. was 49·1°.

Rain fell on 209 days, including snow or sleet on 16 days, and hail on 32 days. The average number of rainy days in the years 1874–93 was 196·4. The total rainfall measured 29·261 inches compared with an average of 27·763 inches in the twenty years 1874–93. During the first half of 1894 (January to June, inclusive) the rainfall was 14·361 inches on 109 days; during the second half (July to December, inclusive) 14·900 inches on 100 days.

As regards the *Direction of the Wind*, 730 observations were made during the year, with this result—N., 51; N.E., 54; E., 88; S.E., 58; S., 63; S.W., 96; W., 198; N.W., 78; Calms, 44.

I have the honour to be

Your Excellency's faithful servant,

THOS. W. GRIMSHAW,

Registrar-General.

GENERAL REGISTER OFFICE,
CHARLEMONT HOUSE,
Dublin, 31st May, 1895.

METEOROLOGICAL OBSERVATIONS

FOR EACH MONTH OF THE YEAR 1894.

By J. W. MOORE, Esq., M.D., F.R.C.P.I., F.R. MET. SOC.

(Extracted from the *Dublin Journal of Medical Science.*)

JANUARY.—Opening with a spell of easterly winds and intensely cold weather, this month ultimately proved wet, open, and stormy, with an almost uninterrupted prevalence of south-westerly and westerly winds. The cold of the first few days of the month was produced in connection with an anticyclone which formed over Central Europe towards the close of December, aided by a down-rush of polar air in the rear of a deep cyclonic system which travelled eastwards across the extreme north of Russia on the 1st and 2nd. The intensity of the frost on the night of the 5th was very great in the inland parts of both England and Ireland. Even at Valentia Island the thermometer sank to 20° in the screen.

In Dublin the arithmetical mean temperature (41·0°) was slightly below the average (41·4°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 40·1°. In the twenty-nine years ending with 1893, January was coldest in 1881 (M. T.=32·2°), and warmest in 1875 (M. T.=46·6°). In 1867 the M. T. was 35·7°, and in 1865 it was 37·8°. In 1871 and in 1886 the M. T. was 37·9°; in 1879 (the "cold year") it was 35·3°. In 1888 the M. T. was 42·1°; in 1889, 42·4°; in 1890, 44·5°; in 1891, 40·1°; in 1892, 38·8°; and in 1893, 40·8°. As a general rule, January in Dublin is not colder, but a shade warmer, than December. This is owing to the full development in January of a winter area of low pressure over the Atlantic, to the northwestward of the British Isles, and to a resulting prevalence of S.W. winds in their vicinity. January, 1894, proved an exception to this rule, the M. T. being 2·5° below that of December, 1893 (43·5°).

The mean height of the barometer was 29·718 inches, or 0·156 inch below the corrected average value for January—namely, 29·874 inches. The mercury rose to 30·619 inches at 9 a.m. of the 3rd, and fell to 29·140 inches at 2 p.m. of the 31st. The observed range of atmospheric pressure was, therefore, as much as 1·479 inches—that is, a little less than one inch and a half.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 40·1°, or 2·7° below the value for December, 1893. Using the formula, *Mean Temp.=Min.* + (*max.—min.* × ·52), the M. T. becomes 41·2°, compared with a twenty-five years' average of 41·5°. The arithmetical mean of the maximal and minimal readings was 41·0°, compared with a twenty-five years' average of 41·4°. On the 11th the thermometer in the screen rose to 54·7°—wind, S.; on the 7th the temperature fell to 18·6°—wind, S.S.W. The minimum on the grass was 15·6° on the 6th.

The rainfall was 2·838 inches, distributed over 23 days. The average rainfall for January in the twenty-five years, 1865-89, inclusive, was 2·200 inches, and the average number of rainy days was 17·3. The rainfall, therefore, and the rainy days were both above the average. In 1877 the rainfall in January was very large—4·322 inches on 25 days; in 1869, also, 4·258 inches fell—on, however, only 18 days. On the other hand, in 1876, only ·406 of an inch was measured on but 9 days; and in 1880 the rainfall was only ·563 of an inch on but 8 days. In January, 1886, 3·244 inches of rain were measured on as many as 26 days; in 1887 ("the dry year"), 1·816 inches fell on 16 days; in 1888, 1·247 inches on 9 days; in 1889, 2·213 inches on 16 days; in 1890, 2·975 inches on 21 days; in 1891, only ·672 of an inch on 14 days; in 1892, 1·698 inches on 20 days; and in 1893, 2·239 inches on 19 days.

Lunar coronæ were seen on the 16th and 17th. The atmosphere was foggy on the 6th, 7th, and 14th. High winds were noted on no less than 21 days, reaching the force of a gale on 9 days—the 4th, 5th, 8th, 12th, 20th, 27th, 28th, 29th, and 30th. Hail fell on the 2nd, 4th, 22nd, 25th, 27th, 28th, and 29th, and snow or sleet on the 3rd, 4th, 5th, 6th, 28th, 30th, and 31st. Temperature exceeded 50° in the screen on 13 days, compared with 7 days in 1893, 6 days in 1892, only 5 days in 1891, 17 days in 1890, and 8 days in 1889; while it fell to or below 32° in the screen on only 7 nights, compared with 4 nights in 1893, 15 nights in 1892, 7 nights in 1891, 1 night in 1890, and 3 nights in 1889. The minima on the grass were 32°, or less, on 17 nights, compared with 16 nights in 1893, 25 nights in 1892, 21 nights in 1891, 15 nights in 1890, and 16 nights in 1889. Lightning was seen on the evening of the 7th.

As in 1893, weather of unusual severity held over the greater part of Europe throughout the opening period of the year, January 1-6. Rough easterly winds, low temperatures, and frost and snow took the place of the stormy southwesterly winds, rains, and mild temperatures which characterised all but the closing days of December, 1893. Sunday (December 31) was a damp, foggy, very cold day in Dublin. Open weather prevailed in the N., severe cold in the S. An anticyclone had its centre over the southern half of Ireland, the barometer reading 30·63 inches at 8 a.m. at Parsonstown. A deep depression was at the same moment travelling eastwards across the north of Russia, the barometer being as low as 28·60 inches in that region. In the rear of the depression over Northern Russia the barometer rose with great rapidity, so that at 8 a.m. of Wednesday, the 3rd, the reading at Færder, near Christiania in Norway, is stated to have been 31·07 inches. At this time atmospheric pressure was low in the Mediterranean basin (29·60 inches at Nice): consequently a strong and bitterly cold easterly wind began to blow over Germany, France, and the southern part of the British Islands. The result was a spell of truly Siberian cold. At 8 a.m. of Friday the thermometer read 14° in London. In Dublin a strong easterly gale had prevailed during

the previous night, and at 11 a.m. a heavy snowstorm set in, with a temperature of 27°. This was renewed in the evening, and Saturday broke with an intense frost, 20° being the temperature at 9 a.m. The thermometer had fallen to 8·6° at the Ordnance Survey Office, Phœnix Park, during the previous night. A fine snow or frozen aqueous vapour fell lightly for several hours on this day, while the clouds came from S. and S.W. In Dublin the mean height of the barometer during the week was 30·233 inches, pressure ranging from 30·619 inches at 9 a.m. of Wednesday, the 3rd (wind, E.), to 29·543 inches at 3 p.m. of Saturday (wind, calm). The corrected mean temperature was 34·0°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 32·7°. On Monday the thermometers rose to 43·6° in the screen; on Saturday they fell to 19·8°. The rainfall was ·179 inch on three days, ·151 inch falling as snow on Friday. Easterly winds prevailed. At 11 p.m. of Saturday the thermometer fell to 18·6° in the screen. On Friday night the lowest minima were 5° at Loughborough, 6° at Parsonstown and Armagh, and 10° at York. At Worksop, in Notts, a minimum of −4·4° was recorded.

Remarkable changes in the weather were experienced in Western Europe in the course of the week ended Saturday, the 13th, warmth and rain taking the place of bitter cold and snow. On the other hand, continuous frost held in Germany, Austria, and Russia, where also the distribution of atmospheric pressure remained anticyclonic throughout, the barometer ranging from 30·60 to 30·80 inches and upwards over Russia. At the beginning of the week gradients for S.W. and S. winds were already forming over the British Islands. On Monday these became steep, and during the remainder of the period depression after depression passed in quick succession northwards outside our western coasts, causing gales in the west and north of the United Kingdom, with heavy rains from time to time in all districts. At the same time, many fine, bright intervals were enjoyed. But the most striking feature in the week's weather was the extraordinary rise of temperature which accompanied the establishment of the S. and S.W. winds. On Sunday morning severe frost prevailed everywhere, except at the west-coast stations both in Great Britain and in Ireland. At Aberdeen the temperature at 8 a.m. was only 14°. By Monday morning the thaw had become general in Ireland, but hard frost still held in the centre and east of Great Britain. At 8 a.m. the thermometer read 17° at Shields. On Tuesday morning no frost was reported from any British station. The temperature now rose day by day until Thursday, when maxima of 57° at Loughborough, 55° at Nairn and in Dublin, and 54° at Oxford, were recorded. Thunder and lightning occurred on Sunday at Valentia Island in Kerry, and lightning was seen at Prawle Point and Holyhead as well as from Dublin. In this city the mean atmospheric pressure was 29·600 inches, the barometer rising to 29·890 inches at 9 p.m. of Sunday (wind, S.S.W.), and falling to 29·385 inches at 9 p.m. of Wednesday (wind also S.S.W.). The corrected mean temperature was 43·6°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 43·4°. On Sunday the thermometers in the screen fell to 18·6°; on Thursday they rose to 54·7°. The rainfall was 1·055 inches on six days, ·334 inch being measured on Friday. Southerly (S.E. to S.W.) winds prevailed throughout. In Dublin the thermometer stood 30° higher on Saturday morning than it had stood that day week.

Except on Sunday, which was a fine, quiet, bright day in Ireland, but very wet in England, the weather during the week ended Saturday, the 20th, was very disturbed—open, squally, and rainy, but with bright intervals. Even in Germany the frost broke up on Monday, and considerable falls of rain occurred from time to time. The fine weather in Ireland was brought about by the presence of small subsidiary areas of low pressure (secondary depressions) over Wales, England, and Brittany. The effect of these was to equalise pressure over Ireland, so that the wind fell light and the sky cleared. On Monday these systems had passed away, and a new primary depression approached Ireland from S.W., causing fresh southerly winds and rain. Several areas of low pressure subsequently passed northeastwards along the western shores of the British Islands, keeping the weather unsettled, with frequent rain and squally S.W., W., and N.W. winds. On Wednesday night the barometer sank below 29 inches over the North of Scotland, and on Saturday morning pressure was as low as 28·72 inches at Wick. A moderate W.S.W. gale prevailed for some hours on this day, and rain fell in plentiful showers. In Dublin the mean atmospheric pressure during the week was only 29·569 inches, the barometer being observed to range between 29·887 inches at 9 p.m. of Sunday (wind, W.N.W.), and 29·186 inches at 9 a.m. of Saturday (wind, W.S.W.). The corrected mean temperature was 45·9°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 44·4°. On Tuesday the screened thermometers rose to 53·5°; on Monday they fell to 36·3°. Rain was measured on five days to the amount of ·533 inch, the maximal fall in 24 hours being ·183 inch on Friday. The prevalent wind was W.S.W.

The westerly type of weather still held over Western Europe throughout the week ended Saturday, the 27th. Several deep depressions passed northeastwards across the Norwegian Sea, while their secondaries traversed the British Islands and the adjoining seas. In consequence of this unsettled state of atmospheric pressure, the weather remained in an exceedingly broken, rough, and rainy condition, and changes of temperature were both sudden and extreme. At 8 a.m. of Sunday the barometer was down to 28·67 inches at Bodö in the north-west of Norway, but as high as 30·32 inches at Biarritz, and 30·40 inches at Lisbon. Strong W.S.W. winds, cloudy skies, and open weather prevailed, and in the afternoon rain fell heavily for a time in Ireland. Monday was colder and brighter, with showers of cold rain and hail. Tuesday was fair and frosty, but at night a new break in the weather began in Ireland, whereas the frost became sharp in England. On this night the screened thermometer fell to 23° at Loughborough and Cambridge, and to 24° in London. This frost was of short duration, for within 24 hours temperature had risen 20° over the centre and S.E. of England, and warm S.W. winds were again sweeping all over the country. A sudden chill on Thursday evening covered the Dublin mountains with snow, but this had all disappeared by Friday afternoon. A fresh to strong gale from W.S.W. followed, and rain fell heavily at times on Saturday. In Dublin the mean atmospheric pressure was 29·670 inches, the barometer ranging between 30·121 inches at 9 p.m. of Tuesday (wind, S.W.), and 29·306 inches at 2 p.m. of Saturday (wind, W.S.W.).

The corrected mean temperature was 42·0°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 41·3°. On Saturday the screened thermometers rose to 52·3°; on Tuesday they fell to 31·0°. Rainfall was measured on five days, the total amount being ·530 inch, of which ·280 inch fell on Saturday. The prevalent wind was once more W.S.W.

During the last four days of the month the weather remained in the unsettled, stormy condition which proved so characteristic of January, 1894. At 8 a.m. of Sunday, the 28th, the barometer was down to 28·11 inches at Bodö, in Norway, while it stood as high as 30·40 inches at Lisbon. Gradients for westerly winds were very steep over the British Islands. Needless to say, the weather was rough and inclement. Snow showers fell in the morning, and sleet and rain in the evening in Dublin. On Monday, the 29th, another large depression came in from the Atlantic, reaching the Shetlands on Tuesday morning. On the evening of the 30th a heavy fall of wet snow occurred in Dublin, and the last day of the month was very severe—snow-showers at midday being followed by a thaw in the afternoon.

In Dublin the rainfall up to January 31, 1894, amounted to 2·838 inches on 23 days, compared with a twenty-five years' average (1865–1889) of 2·200 inches on 17·3 days.

At Knockdolian, Greystones, Co. Wicklow, 4·390 inches of rain fell on 24 days. The heaviest falls in 24 hours were ·630 inch on the 8th, and again on the 10th, and ·450 inch on the 15th.

At Fassaroe, Bray, Co. Wicklow, 5·075 inches fell on 22 days.

At Cloneevin, Killiney, Co. Dublin, the rainfall was 3·260 inches on 23 days, ·550 inch being measured on the 12th. This was the highest rainfall recorded at this station in January during the past 10 years. The average fall for the preceding 9 years was 1·880 inches on 15 days.

FEBRUARY.—This was an open, windy, showery month. Until the 14th and after the 22nd, deep depressions passed in rapid succession north-eastwards across the Norwegian Sea, causing strong S.W. and W. gales and frequent falls of rain, hail, and sleet. At 8 a.m. of the 12th the barometer read only 27·93 inches at Færder on the Christiania Fjord. Conditions were for the most part anticyclonic from the 14th to the 22nd, so that fog and frost were prevalent in that central period of the month. Some very sharp but transitory frosts were felt in Great Britain from time to time. On the 15th the thermometer fell to 3° at Lairg and 4° at Braemar in Scotland. On the 21st a minimum of 16° was recorded at Loughborough. In Ireland the air was much milder.

In Dublin the mean temperature (44·9°) was 2·1° above the average (42·8°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 43·7°. In the twenty-nine years ending with 1893, February was coldest in 1873 (M.T.=37·9°), and warmest in 1869 (M.T.=46·7°). In 1886 the M.T. was 39·7°. In the year 1879 (the "cold year") it was 40·1°. In 1888 it was as low as 38·6°; in 1889 it was 40·3°; in 1890 41·5°; in 1891 44·7°; in 1892 41·3°; and in 1893 42·7°.

The mean height of the barometer was 29·906 inches, or 0·051 inch above the average value for February—namely, 29·855 inches. The mercury rose to 30·448 inches at 9 a.m. of the 20th, and fell to 28·867 inches at 8 p.m. of the 11th. The observed range of atmospherical pressure was, therefore, 1·581 inches—that is, a little less than an inch and a half.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 43·7°, or 3·6° above the value for January, 1894. Using the formula, *Mean Temp.* = *Min.* + (*max.*—*min.* × ·50), the M.T. is 44·9°, compared with a twenty-five years' average of 42·8°. On the 7th the thermometer in the screen rose to 58·6°—wind, W.S.W.; on the 1st the temperature fell to 31·6—wind, S.W. The minimum on the grass was 26·5°, also on the 1st.

The rainfall was 1·903 inches, distributed over 16 days. The average rainfall for February in the twenty-five years, 1865–89, inclusive, was 2·150 inches, and the average number of rainy days was 17·2. The rainfall, therefore, was below the average, while the rainy days were also below it. In 1883 the rainfall in February was large—3·752 inches on 17 days; in 1879, also, 3·706 inches fell on 23 days. On the other hand, in 1873, only ·925 of an inch was measured on but 8 days; in 1890, only ·802 of an inch fell on but 7 days; and in 1887 only ·541 of an inch fell on 11 days. The rainfall in 1887 was much the smallest which had been recorded in February for very many years. But the record for 1891 is probably unparalleled—·042 inch on 2 days. The nearest approach to this drought was in September, 1865, when only ·056 of an inch of rain was measured on but 3 days. In 1892, the rainfall was 2·119 inches on 19 days; and in 1893, 2·669 inches fell on 22 days.

Snow or sleet fell on 2 days—the 12th and 24th; while hail was observed on 4 days—the 11th, 12th, 24th, and 27th.

The atmosphere was foggy on 8 days—namely, the 5th, 14th, 18th, 19th, 20th, 21st, 22nd, and 26th. The amount of cloud—57·2 per cent.—was considerably in defect of the average—66 per cent. High winds were noted on 17 days, reaching the force of a gale on 8 occasions—namely, the 1st, 6th, 7th, 10th, 11th, 23rd, 25th, and 26th.

The temperature reached or exceeded 50° in the screen on 15 days, compared with 13 days in 1893, 6 days in 1892, and 14 days in 1891; while it fell to or below 32° in the screen on only 2 nights, compared with 5 nights in both 1893 and 1892, and with 2 nights in 1891. The minima on the grass were 32°, or less, on 10 nights, compared with 13 nights in 1893, 16 nights in 1892, and 17 nights in 1891. The thermometer never failed to rise to or above 40° in the screen during the daytime.

Lightning was seen on the night of the 11th. There was an aurora on the nights of the 23rd and 25th. Solar halos were seen on the 21st and lunar halos on the evenings of the 13th, 19th, 21st, and 22nd.

During the first three days of the month open but changeable, stormy, and often rainy weather prevailed in the British Islands, and in Western Europe generally. On Thursday, the 1st, a rapid rise of temperature took place. It amounted to 20° in a few hours, and caused all traces of the snow which had fallen on January 30 quickly to disappear. After many hours of squally, blustering

weather, a fine, bright day brought this very unsettled period to a close. Brilliant aurora was seen from Wick and Aberdeen on the night of the 2nd, when also lightning was reported from those stations as well as from Roche's Point.

At the beginning of the week ended Saturday, the 10th, conditions were quieter than of late, and mild, tolerably fine weather prevailed. Monday broke dull and foggy, but afterwards proved mild and bright. At this time an area of high pressure, in which readings exceeded 30·60 inches, lay over the west of France, and the barometer was low (29·20 inches) only in the North-west of Norway. On Tuesday, however, a new and deep depression had advanced to the Hebrides, Caithness, and the Orkneys and Shetlands, causing a rapid rise of temperature and fresh or strong gales from S.W., W.S.W., or W. in most parts of the British Islands. At 8 a.m. of Wednesday, the barometer ranged from 30·56 inches at Lyons, to 28·36 inches at Bodö, in Norway. This great difference of 2·20 inches in atmospheric pressure accounted for the strong S.W. to W. winds and gales which swept over Western Europe at this time. Temperature ruled very high on Wednesday, the screened thermometer rising to 59° at Loughborough and in Dublin (58·6°), 57° in London (Westminster), and at Shields, Cambridge, and Yarmouth; and 56° or 55° at many other stations. The last three days of the week were cooler, but just as unsettled, and changeable—squally S.W. to W.N.W. winds, passing showers or heavy rains, and fine, bright intervals prevailing in rapid succession. Hail and lightning were reported from several Scottish stations on Wednesday and Thursday. In Dublin the mean height of the barometer was 29·901 inches, pressure rising to 30·382 inches at 9 a.m. of Monday (wind, W.S.W.), and falling to 29·338 inches at 9 p.m. of Saturday (wind, S.W.). The corrected mean temperature was 47·9°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 47·3°. On Wednesday the screened thermometers rose to 58·6°, having fallen to 40·0° on Monday. No frost occurred even on the grass. The rainfall was ·751 inch, ·262 inch falling on Thursday, and ·360 inch on Saturday. S.W. and W. winds again prevailed, as in many past weeks of the present winter. At 8 a.m. of Saturday the barometer read only 28·24 inches at Bodö, in Norway.

Opening with the same tempestuous weather which had prevailed for so long, the week ended Saturday, the 17th, closed with a more than half-fulfilled promise of finer and quieter conditions. After Monday the wind moderated, and the rainfall almost ceased for a time, while the period ended with a dry, bright, and spring-like day—at least in Ireland. Some very remarkable incidents have to be recorded in connection with the weather of this week. For example, on Sunday and Monday a storm-centre of exceptional intensity passed eastwards across Scotland and the southern half of Scandinavia. By 8 a.m. of Monday, the barometer fell to 27·93 inches at Færder, on the Christiania Fjord, while it stood as high as 30·31 inches at Lisbon. Very violent S.W. to W.N.W. gales accordingly swept over the British Islands, Holland, and Germany, accompanied by hail, thunder, and lightning in several places—notably over central Ireland on Sunday night. A great dip in temperature followed in Great Britain, the thermometer falling on Wednesday night to 10° at Nairn, 20° at Aberdeen, and 26° in the Lowlands and North of England. An anticyclone, or rather a ridge of high pressure, passed on to Scandinavia from Great Britain on Thursday, and at 8 a.m. of Friday the barometer read 30·43 inches at Færder, or 2·50 inches higher than at the same hour four days previously. Such a vast range of pressure is very unusual in so short a time. By 8 a.m. of Saturday the barometer had risen to 30·59 inches at Færder. On Friday and Saturday a V-shaped shallow depression brought heavy rains to Great Britain. In Dublin the mean reading of the barometer was 29·832 inches, the observed extremes being—highest, 30·204 inches at 9 p.m. of Saturday (wind, N.W.); lowest, 28·867 inches, at 8 p.m. of Sunday (wind, W.). The corrected mean temperature was 44·0. The mean dry bulb readings at 9 a.m. and 9 p.m. were 42·3°. On Sunday the screened thermometers rose to 54·8; on Tuesday they sank to 32·7°. Rain fell on four days to the amount of ·198 inch, ·169 inch being measured on Sunday. At 12.30 p.m. of Monday a severe squall of snow and hail passed over Dublin. Vivid flashes of lightning were seen on Sunday evening. The prevailing winds were W. and S.

For the first time for many weeks the weather was of an anticyclonic type during several consecutive days of the week ended Saturday, the 24th. On Friday, however, a large depression encroached on the Irish and Scotch coasts, causing a gale from S. and S.W. and a heavy fall of rain. At the beginning an anticyclone, in which the barometer exceeded 30·60 inches, lay over the Christiania Fjord, where six days previously pressure was below 28 inches (27·93 inches at Færder). A heavy rainfall had occurred in Great Britain, but the weather was rainless though dull and foggy in Ireland. As the hours passed by, the anticyclone spread out westwards and southwards, so that on Monday morning it covered England, Ireland, and France. Very sharp frost prevailed for a succession of nights in England, but it was by no means so severe in either Scotland or Ireland. At Loughborough, in Leicestershire, the minima were 30°, 18°, 18°, 16°, 17°, 23°, and 30°. At Parsonstown, a central Irish station, the corresponding values were 29°, 30°, 33°, 33°, 34°, 35°, and 35°. A great deal of fog prevailed at night and in the mornings during the anticyclonic period, but this all cleared away with the coming of Friday's S.W. gale. On Friday night, bright aurora borealis was seen for many hours, waves of auroral light sweeping up to the zenith from the northern sky in rapid succession and with extreme velocity. Saturday was a bright, breezy, changeable day, with an occasional shower of sleety rain and hail. In Dublin the mean pressure was 30·163 inches, the barometer rising to 30·448 inches at 9 a.m. of Tuesday (wind calm), and falling to 29·358 inches at 4 p.m. of Friday (wind S.W.). The mean temperature was 40·7°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 38·9°. On Tuesday the screened thermometers fell to 31·8°, on Friday they rose to 51·8°. Rain fell on two days to the amount of ·271 inch, ·160 inch being measured on Friday. The wind was generally calm at first, but finally became fresh to strong from S.W. and W.

The weather remained very unsettled and stormy during the last four days of the month. A succession of very deep atmospheric depressions travelled across Scotland and the Norwegian Sea,

while their secondaries passed over Ireland and England. Rain fell plentifully, and thunder, lightning, and hail or sleet prevailed over the more northern parts of the United Kingdom.

In Dublin the rainfall up to February 28, 1894, amounted to 4·741 inches on 39 days, compared with 4·908 inches on 41 days in the same period in 1893, 3·817 inches on 39 days in 1892, ·714 inch on 16 days in 1891, and a twenty-five years' (1865–1889) average of 4·350 inches on 34·5 days.

At Knockdolian, Greystones, Co. Wicklow, 2·390 inches of rain fell in February on 15 days; the heaviest fall in 24 hours was ·630 inch on the 11th. The total fall to February 28th inclusive was 6·780 inches on 39 days.

The rainfall in February at Cloneevin, Killiney, Co. Dublin, amounted to 1·19 inches on 18 days. The average rainfall for February during 9 years at this station is 1·660 inches, on 12 days. The greatest rainfall in 24 hours was ·17 of an inch on the 8th. Since January 1, the rainfall was 4·45 inches, on 41 days.

MARCH, 1894, was a month of surprises. Until the 15th the weather was unsettled, stormy, and showery; after that date absolute drought occurred, lasting until the close of the month. During this period the sky was for the most part unusually free from cloud, hot sunshine prevailed by day, while the nights were clear and sharp, and, indeed, often frosty. The mean amount of cloud throughout amounted to only 32 per cent.

In Dublin the arithmetical mean temperature (45·4°) was considerably above the average (43·1°) the mean dry bulb readings at 9 a.m. and 9 p.m. were 43·8°. In the twenty-nine years ending with 1893, March was coldest in 1867 and 1883 (M. T. = 39·0°), and warmest in 1893 (M. T. = 48·1° and in 1868 (M. T. = 47·3°). In 1876 the M. T. was 41·1°, in 1879 (the "cold year") it was 42·5°, in 1888 it was as low as 39·8°, in 1889 it was 44·0°, and in 1890 it was as high as 45·1°. In 1891 it was only 41·7°; and in 1892 it was as low as 39·1°. As a general rule, February in Dublin is only a shade colder than March. This is due to the fact that the Continental anticyclone usually embraces the British Isles and Scandinavia in March, causing easterly winds. In 1892 February was actually 2·2° warmer than March, and in the present year March was only 0·5° warmer than February.

The mean height of the barometer was 29·896 inches, or 0·020 inch below the corrected average value for March—namely, 29·916 inches. The mercury rose to 30·434 inches at 9 a.m. of the 23rd, having fallen to 29·096 inches at 7 a.m. of the 13th. The observed range of atmospherical pressure was, therefore, 1·338 inches—that is, more than an inch and three-tenths.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 43·8°, or only 0·1° above the value for February, 1894. Using the formula, *Mean Temp.* = *Min.* + (*max.*—*min.* × ·485), the M.T. becomes 45·1°. The arithmetical mean of the maximal and minimal readings was 45·4°, compared with a twenty-five years' average of 43·1°. On the 29th the thermometer in the screen rose to 63·6°—wind, E.; on the 17th the temperature fell to 31·8°—wind, E.S.E. The minimum on the grass was 28·1°, also on the 17th.

The rainfall was 1·287 inches, distributed over 14 days. The average rainfall for March in the twenty-five years, 1865–89, inclusive, was 2·061 inches, and the average number of rainy days was 16·5. The rainfall, therefore, was much below the average, while the rainy days were also to a less extent below it. In 1867 the rainfall in March was very large—4·972 inches on 22 days; in 1888, 3·753 inches fell on 18 days; in 1866 also 3·629 inches fell on 21 days. On the other hand, in 1871, only ·815 of an inch was measured on 12 days, and in 1874 only ·953 of an inch fell on 12 days. In 1887 (the "dry year"), 1·485 inches of rain fell on 15 days; in 1889, 1·076 inches fell on, however, as many as 17 days; in 1890 the fall was as much as 3·693 inches on 17 days; but in 1891 only ·936 of an inch fell on 16 days, and in 1892 only ·991 of an inch on but 9 days. The smallest March rainfall was ·288 inch on 8 days in 1893.

The atmosphere was more or less foggy in the city on 10 days—viz., the 16th, 17th, 19th, 20th, 21st, 22nd, 23rd, 24th, 29th, and 31st. High winds were noted on 12 days, reaching the force of a gale on four occasions—the 1st, 5th, 10th, and 11th. Snow or sleet occurred on the 11th, 12th, and 15th; and hail fell on the 1st, 2nd, 11th, 13th, and 15th. The temperature exceeded 50° in the screen on as many as 22 days, compared with 26 days in 1893, only 7 days in 1892, 9 days in 1891, and 19 days in 1890, while it twice fell to 32° in the screen. In March, 1892, frost had occurred in the shade on as many as 16 nights; but no shade frost occurred in March, 1893. The minima on the grass were 32°, or less, on 12 nights, compared with the same number of nights in 1893, 25 nights in 1892, 20 nights in 1891, and 16 nights in 1890. On 2 days the thermometer rose above 60° in the screen while (as in 1893) it never failed to reach 40°. In March, 1892, the thermometer did not rise to 40° in the screen on 9 days. Solar halos were seen on the 12th and 16th. Brilliant aurora borealis occurred on the night of the 30th.

The first three days of the month were changeable, with frequent showers and strong, chiefly westerly, winds. A fresh gale sprang up in the course of Wednesday night, February 28, and was followed by a downpour of rain and afterwards by sharp hail showers on Thursday afternoon, the 1st. By 8 a.m. of Friday the barometer had fallen to 28·57 inches at Sumburgh Head in the Shetlands. A rapid increase of atmospheric pressure ensued on this day and a brief spell of fair, spring-like weather was enjoyed. On Saturday the wind backed to S.W. and freshened with renewed showers.

The weather remained of the "westerly type" throughout the week ended Saturday, the 10th. Strong or squally S.W. to W.N.W. winds, most unstable temperature, frequent rains or passing showers, and fine, bright intervals make up the record of the period. On Sunday a depression lay off the north of Scotland, while another was found over the eastern part of that country. N.W. winds and cool, showery weather prevailed in Ireland. On Monday a new and much more extensive depression came in from the Atlantic. Its centre lay between the Shetlands and Norway at 8 a.m. of Tuesday, when pressure ranged from 30·34 inches at Biarritz to 28·90 at Sumburgh Head (Shetland

Mainland). The cyclonic circulation of winds round this low pressure system was well marked—N. in the Shetlands, N.W. in Scotland and Ireland, W. in England, S.W. in Belgium and Holland, S. in Denmark, and S.E. in Norway. Hardly had this system moved away in a south-easterly direction, when another depression appeared off the west of Scotland, bringing with it more rain or showers. After Wednesday a tendency to anticyclonic conditions existed over the Baltic, so that the wind became south-easterly in Sweden and Norway. In the British Islands, however, S.W. and W. winds persisted. In Dublin the mean height of the barometer was 29·678 inches, pressure ranging between 30·317 inches at 9 p.m. of Sunday (wind, N.W.), and 29·296 inches about 3 p.m. of Friday (wind, W.S.W.) The corrected mean temperature was 44·8°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 44·5°. On Friday the thermometers in the screen rose to 54·7°, having fallen to 35·9° on Wednesday. Rain fell on every day of the week to the total amount of ·616 inch, ·200 inch being measured on Monday, and ·192 inch on Thursday. The prevailing winds were W.N.W. and W.S.W.

Opening amid storm and rain, the week ended Saturday, the 17th, witnessed a change to quieter, finer, though colder weather, and closed with a spring-like day. At 8 a.m. of Sunday the barometer read 30·10 inches at Lyons, but the centre of a very large and deep depression lay between the Orkneys and Shetlands—near the centre the barometer read only 28·10 inches or less; at Sumburgh Head the reading was 28·19 inches, at Wick it was 28·17 inches. The difference of 2 inches in atmospheric pressure between Central France and the North of Scotland caused strong westerly (S.W. to N.W.) gales on the British coasts, and the weather was very rough and unsettled. Temperature was particularly unsteady—in Dublin the thermometer had risen to 52·7° during the night, but fell to 35·9° in the course of the day, when heavy showers of hail, sleet, and snow passed over. At Cambridge, the maximum on Sunday was 56°. On Monday night a deep secondary system travelled north-eastwards across England, causing heavy rains or falls of wet snow in many places, and gales of considerable violence on the English and Welsh coasts. Again on Wednesday night did a depression cross England, but on this occasion in a south-easterly direction. Hail and sleet showers were very prevalent until Friday, when the weather became dry, fine, and quiet, with fog and frost at night and bright sunshine by day. On Saturday, after a frosty night, temperature rose fast. In Dublin the mean atmospheric pressure was 29·605 inches, the barometer ranging between 29·096 inches at 7 a.m. of Tuesday (wind, W.), and 30·226 inches at 9 p.m. of Saturday (wind, S.W.). The corrected mean temperature was 41·5°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 39·6°. The extremes of temperature were both recorded on Saturday—they were, highest, 52·8°; lowest, 31·8°. Rain fell on five days to the amount of ·555 inch, ·268 inch being registered on Monday. The prevailing winds were W. and W.N.W.

Conditions were anticyclonic throughout the week ended Saturday, the 24th, and fine, quiet weather prevailed in the British Islands and Central Europe. In the far North and also in the Mediterranean basin the weather was less settled, but nowhere was it very unfavourable. At first the wind was westerly, but this soon gave place to calms and finally to freshening easterly winds, particularly in the south. Owing to radiation at night and to unclouded sunshine by day the diurnal range of temperature was large. Some very high readings were recorded at Aberdeen, viz., 63° on Sunday and 62° on Wednesday. On the other hand, the screened thermometer fell to 28° on Sunday night at Loughborough and in London. In Dublin, the sky was cloudy from Sunday afternoon to Tuesday afternoon, but with this exception the amount of cloud was small. Heavy dew, haze, and fog prevailed at night and in the mornings, but brilliant sunshine held during the daytime. The mean height of the barometer was 30·324 inches, atmospheric pressure ranging between 30·434 inches at 9 a.m. of Friday (wind, S.S.E.), and 30·246 inches at 9 a.m. of Wednesday (wind calm). It will be observed that the extreme range of atmospheric pressure at this station did not amount to two-tenths of an inch. The corrected mean temperature was 46·2°. The mean value of the dry bulb readings at 9 a.m. and 9 p.m. was 45·1°. On Wednesday the shade temperature reached 57·7°; on Friday it fell to 31·9°. There was no measurable rainfall, although a very light drizzle was observed for a few moments about 12.30 p.m. of Monday. The prevalent winds were S.E. and E.N.E.

During nearly the whole of the week ended the 31st, anticyclonic conditions were again prevalent over western Europe, the central portion of the high pressure system being located for the most part over Denmark, North Germany, and the South of Scandinavia. The prevailing winds were therefore easterly over France and the southern parts of the United Kingdom, but variable or southerly in the north of our Islands, and south-westerly or westerly in Scandinavia. The weather was generally fair and dry, but a good deal of haze or fog was reported over our Islands during the night and early morning hours, and at some of the eastern stations the weather at times remained thick all day. Owing to the prevalence of fog, temperature varied considerably in different places, but in the day time the thermometer was usually high, the maxima occasionally exceeding 65° in the more central and southern parts of the Kingdom. At night the weather was cold, especially in the inland districts, where frosts occurred rather frequently not only on the surface of the ground, but also in the screen. The daily range was, therefore, very large, the mean value for the entire week being as high as 35·6° both at Loughborough and Cambridge. Towards the close of the period the anticyclone receded slowly to the eastwards, and a shallow low pressure system spread over our Islands from the Atlantic. With the exception, however, of a few local showers, the weather remained fine in nearly all districts. On the night of the 30th brilliant aurora was seen over the greater part of the United Kingdom. In Dublin the mean height of the barometer was 30·002 inches, atmospheric pressure ranging between 30·200 inches at 9 p.m. of Wednesday (wind, E.S.E.), and 29·660 inches at 9 p.m. of Friday (wind, E.). The corrected mean temperature was 48·6°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 46·9°. The highest shade temperature was 63·6° on Thursday. The lowest shade temperature was 37·0° on Sunday. The only rainfall was in the form of very slight showers on Saturday. The general direction of wind was easterly. This week was remarkable for unusually fine and cloudless weather. On Friday night there was a brilliant play of auroral light in the northern sky.

The rainfall in Dublin during the three months ending March 31st amounted to 6·028 inches on 53 days, compared with 5·196 inches on 49 days in 1893, 4·808 inches on 48 days in 1892, only 1·650 inches on but 32 days in 1891, 7·470 inches on 45 days in 1890, 5·738 inches on 53 days in 1889, 6·097 inches on 41 days in 1888, and a twenty-five years' average of 6·411 inches on 51·0 days (1865–1889, inclusive).

At Knockdolian, Greystones, Co. Wicklow, 1·505 inches of rain fell on 14 days during March; and the total rainfall since January 1, 1894, equals 8·285 inches on 53 days. The corresponding figures for 1893 are ·205 inch on 6 days, the total rainfall since January 1 having been 7·475 inches on 49 days.

The rainfall in March at Cloneevin, Killiney, Co. Dublin, was 1·11 inches on 14 days, as against ·26 inch on 9 days in 1893, ·98 inch on 10 days in 1892, and a nine years' average of 1·72 inches on 140 days. The maximum in the 9 years was 3·59 inches in 1888, the minimum was ·26 inch in 1893. At this station the total rainfall since January was 5·56 inches on 55 days, compared with a fall of 5·79 inches on 51 days in the first quarter of 1893.

April.—Like April, 1893, this was a mild month, and led to a forward spring. Unlike that month, however, the amount of cloud was large, particularly in the mornings, and rain fell frequently (on 20 days) and heavily (to the total amount of 3·123 inches). The prevalent winds were from S.E. and S. Under these several circumstances vegetation made rapid progress, and by the end of the month most of the forest trees were in full foliage, and the hawthorn, lilac, and laburnum were fast coming into blossom.

In Dublin the arithmetical mean temperature (49·9°) was 2·2° above the average (47·7°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 48·7°. In the twenty-nine years ending with 1893, April was coldest in 1879 (the "cold year"), (M. T.=44·5°") and warmest in 1893 (M. T.=51·4°). In 1886, the M. T. was 46·3°, in 1887 it was as low as 45·1°, in 1888 it was (as also in 1891) only 45·7°, in 1889, 46·1°; in 1890, 47·3°; and in 1892, 46·2°. The month of April, 1893, was the warmest for at least 30 years.

The mean height of the barometer was 29·801 inches, or 0·049 inch below the average value for April—namely, 29·850 inches. The mercury rose to 30·427 inches at 9 p.m. of the 30th, having fallen to 29·261 inches at 9 a.m. of the 24th. The observed range of atmospheric pressure was, therefore, 1·166 inches—that is, a little less than an inch and two-tenths.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 48·7°, or 4·9° above the value for March, 1894. Using the formula, *Mean Temp.* $=$ *Min.* $+$ (*max.*—*min.* $\times$ ·476), the value becomes 49·6°, or 2·2° above the average mean temperature for April, calculated in the same way, in the twenty-five years, 1865–89, inclusive (47·4°). The arithmetical mean of the maximal and minimal readings was 49·9°, compared with a twenty-five years' (1865–1889 inclusive) average of 47·7°. On the 8th, the thermometer in the screen rose to 62·7°—wind, S.E.; on the 1st the temperature fell to 38·0°—wind, calm. The minimum on the grass was 30·0° on the 2nd.

The rainfall was 3·123 inches, distributed over as many as 20 days. The average rainfall for April in the twenty-five years, 1865–89, inclusive, was 2·055 inches, and the average number of rainy days was 15·2. The rainfall, therefore, was considerably above the average, while the rainy days were also much in excess. In 1877 the rainfall in April was very large—4·707 inches on 21 days; in 1882, also 3·526 inches fell on 20 days. On the other hand, in 1873, only ·498 of an inch was measured on 8 days; and in 1870, only ·838 of an inch fell, also on 8 days. The fall in 1890 was 1·575 inches on 14 days; in 1891, 1·553 inches fell on 14 days; in 1892, 1·114 inches on 13 days; and in 1893, 1·046 inches on seven days.

There were lunar halos on the 15th and 17th. The atmosphere was more or less foggy on the 1st 3rd, 4th, 6th, 9th, 10th, 11th, and 20th. High winds were noted on only 5 days, but reached the force of a gale on two occasions—namely, the 22nd and 24th. No snow or sleet was seen, but hail fell on the 13th and 24th. The temperature exceeded 50° in the screen on every day, except the 6th, compared with every day in 1893, only 24 days in April, 1892, and only 18 days in April, 1891. It rose to or above 60° on only 3 days, but never fell to 32° in the screen. The minimum on the grass was 32°, or less, on only one night, the 2nd, compared with five nights in April, 1893. The mean lowest temperature on the grass was 40·0°, compared with 38·2° in 1893, 32·4° in 1892, 34·1° in 1891 and 1890, 34·4° in 1889, 34·6° in 1888, and 31·6° in 1887. There was an aurora borealis on the evening of the 5th.

Although the distribution of pressure, and the winds over Northwestern Europe (including the British Islands), during the week ended Saturday the 7th were mainly anticyclonic, the system was of a somewhat complex character, and at times shallow depressions advanced from the southward over Spain, the Bay of Biscay, and France, but on reaching the southern parts of the United Kingdom they either filled up or moved away again in a northwesterly direction. Thus, while the wind was chiefly easterly in direction, and the weather fine and dry, there were occasional showers over our southern and western districts, sometimes accompanied by thunder and lightning, and over the southwestern parts of the Iberian Peninsula the fall of rain was heavy. Temperature varied a good deal—as a rule the nights were cold and hazy or foggy, the days bright and warm, and the winds light; on Friday, however, the easterly wind blew very freshly over the southern parts of the kingdom, a good deal of cloud was experienced, and the day-maxima of temperature were lower by many degrees than those of the earlier days. On Saturday, however, there was a recovery, the day being fine and warm. In Dublin the mean height of the barometer was 29·995 inches, atmospheric pressure ranging between 30·174 inches at 9 a.m. of Thursday (wind, calm), and 29·807 inches at 9 p.m. of Monday (wind, E.N.E.). The corrected mean temperature was 47·1°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 46·4°. The highest shade temperature was 55·6° on Thursday, the lowest 38·0° on Sunday. The rainfall was ·219 inch on 4 days; the

general direction of the wind was E.N.E. In contrast to the bright, dry weather of the preceding week, clouds and fogs were prevalent, with rain on most days.

The week ended Saturday, the 14th, witnessed the establishment of cyclonic conditions and changeable, rainy weather in Ireland and in many parts of Great Britain also. On the Continent, however, quiet, fair weather held until almost the close of the period, leading to complaints of drought from certain districts in Italy, Germany, France, and Scandinavia. From the beginning of the week a tendency was observed for shallow depressions to advance over the British Islands from the southwestward. These were subsidiary to a larger area of low barometer over the Atlantic, and on Wednesday they produced sharp thunderstorms in England and Wales as well as over the west of Scotland. On this day rain fell heavily in central Ireland also—·89 inch being measured at Parsonstown in the King's County. The changeable character of the weather became still more decided towards the close of the week, and on Saturday morning an extensive and deep depression moved northwards along the west coast of Ireland. At 8 a.m. the barometer was down to 29·128 inches at Valentia Island (Kerry) and to 29·18 inches at Belmullet (Mayo). Southerly to easterly gales were felt at some exposed coast stations, and rain fell abundantly in several places. In Dublin the mean height of the barometer was 29·750 inches, pressure ranging from 29·884 inches at 9 a.m. of Wednesday (wind, calm) to 29·384 inches at 9 a.m. of Saturday (wind, E.S.E.). The corrected mean temperature was 51·8°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 50·1°. On Sunday the screened thermometers rose to 62·7°, on Friday they fell to 43·9°. The rainfall amounted to 1·096 inches on six days, ·561 inch being measured on Friday. The prevailing direction of the wind was S.S.E. Hail fell on Friday. The atmosphere was damp and thick or foggy on Monday and the two following days.

The weather during the week ended Saturday, the 21st, was at first very broken and rainy in Ireland, but it took up on Wednesday and remained fair and for the most part bright until the end. In the earlier part of the week, atmospheric pressure was low in the British Isles and their immediate neighbourhood, high over the extreme north of Europe, and subsequently over the Iberian Peninsula as well. Both on Monday and Tuesday at least two areas of low pressure were found lying over the United Kingdom, where the weather was consequently broken and wet or showery. The showers were very heavy in places and were sometimes (especially on Wednesday) accompanied by thunder and lightning. In London hail fell on Tuesday. During the night of this day one of the depressions just spoken of moved southeastwards from St. George's Channel to France, the result being a N. wind and clearing weather in Ireland, but a continuance of cloud, gloom, and rainy conditions in the S. and S.E. of England. On Friday the barometer fell decidedly in Ireland, and the wind became southerly with a rising temperature and increasing cloud. Meanwhile the fair weather spread more and more over England, where temperature had failed to reach 50° in the southeastern counties on Thursday owing to a northerly air current and a densely clouded sky. In Dublin the mean height of the barometer was 29·774 inches, pressure ranging between 29·302 inches at 9 p.m. of Monday (wind, calm), and 30·178 inches at 9 p.m. of Thursday (wind, E.S.E.). The corrected mean temperature was 49·0°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 48·4°. The extreme temperatures were 59·4° and 38·8° respectively, and were recorded on the same day, namely, Friday. Rain fell on the first three days to the total amount of ·631 inch, ·319 inch being registered on Sunday. The prevailing wind was S.S.E.

The weather was in a very unsettled state until nearly the close of the week ended Saturday, the 28th, when it became fine and bright in Ireland. On Sunday and again on Tuesday gales of considerable force swept over this country from S.E. and S. The storms were accompanied by heavy rains, or showers of cold rain and hail, as well as lightning. In England the gales were not much felt, but severe thunder and hail storms occurred in many places on Wednesday and following days. In the course of Sunday gradients for southerly winds became very steep over Ireland, where the wind accordingly freshened to a gale as the day advanced. By 6 p.m. the barometer fell to 29·15 inches at Valentia Island in Kerry. At night heavy rain occurred in the S. and S.E. of Ireland, while the depression moved away towards N.W. At the same time, however, a series of secondary areas of low pressure developed over St. George's and the English Channels, causing the broken weather to spread out in all directions. On Tuesday morning a large and deep depression was again found off the S.W. of Ireland, the barometer reading only 28·81 inches at Valentia Island at 8 a.m. Like its predecessor, this system passed off towards N.N.W. and broke up, sending several secondaries eastwards across the United Kingdom on Thursday and Friday to carry rain to nearly all districts. In Dublin the mean height of the barometer was 29·577 inches, pressure ranging from 29·261 inches at 9 a.m. of Tuesday (wind, S.) to 30·095 inches, at 9 p.m. of Saturday (wind, calm). The corrected mean temperature was 49·8°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 49·3°. The extreme temperatures in the shade were both recorded on Saturday—highest, 60·0°; lowest, 42·0°. Rain fell on six days to the total amount of ·977 inch, ·421 inch being registered on Monday. The prevalent winds were S.S.E. and S.

Sunday, the 29th, was at first dull, afterwards very rainy owing to the advance of a shallow depression from the northwestward. On Monday, the 30th, the weather became bright and bracing with a crisp northerly wind after a dull morning.

The rainfall in Dublin during the four months ending April 30th amounted to 9·151 inches on 73 days, compared with 6·242 inches on 56 days in 1893, 5·922 inches on 61 days during the same period in 1892, only 3·203 inches on 46 days in 1891, 9·045 inches on 59 days in 1890, 8·345 inches on 74 days in 1889, 8·090 inches on 58 days in 1888, and a twenty-five years' average of 8·466 inches on 66·2 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall during April, 1894, amounted to as much as 4·171 inches on 17 days. The heaviest rainfalls in 24 hours were ·726 inch on the 29th, 7·10 inch on the 15th, and ·560 inch on the 22nd. In 1893 only 1·055 inches of rain fell at this

station on 5 days. The total rainfall in 1894 up to April 30 was 12·456 inches on 70 days. The corresponding figures in 1893 were 8·530 inches on 54 days.

The rainfall in April, 1894, at Cloneevin, Killiney, Co. Dublin, was 3·53 inches on 19 days. The maximal fall in 24 hours was ·52 inch on the 15th. The average rainfall in April for nine years was 1·51 inches on 12 days. Since January 1, 1894, 9·09 inches of rain fell at this station on 74 days. The corresponding values of 1893 were 6·94 inches on 57 days.

MAY.—This was a cold, changeable month, more like an ordinary March than May. Very heavy rainfalls occurred in nearly all parts of the British Islands at one time or another—in the week ending Saturday, the 19th, as much as 2·617 inches fell in Dublin and 3·210 inches at the Ordnance Survey Office, Phœnix Park. On the other hand, there was no measurable rainfall in Dublin during the following week, whereas 1·63 inches fell at the North Foreland, in Kent, this large fall being followed by a downpour of 1·19 inches on Sunday, the 27th. In Dublin the mean temperature of the month was actually lower than that of April by nearly one degree, and it was 7·5° below that of May, 1893—49·2° compared with 56·7°. The mean dry bulb readings at 9 a.m. and 9 p.m. were, no doubt, half a degree above the corresponding value for April, but this was due to a rapid rise of temperature in the early morning caused by bright sunshine after clear, frosty nights. May, 1894, ranks fourth in order of coldness within the past thirty years.

In Dublin the arithmetical mean temperature (49·2°) was decidedly below the average (52·0°); the mean dry bulb readings at 9 a.m. and 9 p.m. were also 49·2°. In the twenty-nine years ending with 1893, May was coldest in 1869 (M. T. = 48·2°), in 1885 (M. T. = 48·7°), and in 1879 (the "cold year") (M. T. = 48·8°). It was warmest in 1893 (M. T. = 56·7°), 1868 (the "warm year") (M. T. = 55·8°), and 1875 (M. T. = 54·9°). In 1886 the M. T. was 50·5°; in 1887, 51·8°; in 1888, 52·5°; in 1889, 54·6°; in 1890, 53·2°; in 1891, only 49·6°; and in 1892, 53·8°.

The mean height of the barometer was 29·970 inches, or 0·019 inch below the corrected average value for May—namely, 29·989 inches. The mercury rose to 30·491 inches at 9 a.m. of the 1st, and fell to 29·543 inches at 9 p.m. of the 9th and also at 9 a.m. of the 10th. The observed range of atmospheric pressure was, therefore, 0·948 of an inch.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 49·2°, or only half a degree above the value for April, 1894 (48·7°). Using the formula, *Mean Temp.* = *Min.* + (*max.*—*min.* × ·47), the value was 48·8°, or 2·8° below the average mean temperature for May, calculated in the same way, in the twenty-five years, 1865–89, inclusive (51·6°). The arithmetical mean of the maximal and minimal readings was 49·2°, compared with a twenty-five years' average of 52·0°. On the 25th the thermometer in the screen rose to 64·5°—wind, N.; on the 21st the temperature fell to 33·0°—wind, also N. The minimum on the grass was 26·9°, also on the 21st.

The rainfall amounted to 3·558 inches, distributed over 17 days. The average rainfall for May in the twenty-five years, 1865–89, inclusive, was 2·030 inches, and the average number of rainy days was 15·4. The rainfall and the rainy days, therefore, were much above the average. More than one-third of the rainfall (1·330 inches) fell on one day—the 15th. In 1886 the rainfall in May was very large—5·472 inches on 21 days; in 1869 also 5·414 inches fell on 19 days. On the other hand, in 1871, only ·378 inch was measured on 9 days; in 1876 only ·798 inch fell on 6 days; in 1887 only ·882 inch on 10 days; and in 1888 only ·978 inch on 11 days. In 1890, 2·438 inches fell on 17 days. In 1891 May was the first month in which the rainfall exceeded the average. It amounted to 2·792 inches on 17 days. In 1892 the large amount of 4·177 inches fell on 19 days. In 1893, the fall was 1·666 inches on 10 days.

A solar halo was seen on the 6th. High winds were noted on as many as 11 days, attaining the force of a gale on the 16th only. Thunder was heard on the 15th, 29th, and 30th. Hail fell on the 7th, 20th, and 28th. Snow and sleet were seen on the 20th. The atmosphere was foggy on the 16th, 17th, and 23rd.

During the month the thermometer did not fall below 32° in the screen, but it indicated frost on the grass on the nights of the 21st, 22nd, 23rd, and 30th. The mean minimal temperature on the grass was 37·6°, compared with 45·6° in May, 1893, 41·3° in 1892, 37·7° in 1891, 42·2° in 1890, 42·4° in 1889, 37·5° in 1888, and 37·9° in 1887.

The period ended Saturday, the 5th, was changeable, rather cold, and cloudy. A complete reversal of the wind directions prevalent during the three preceding weeks occurred, N. and N.W. winds taking the place of the S.S.E. winds previously experienced. At times the barometer was very high off the W. and S.W. of Ireland, while a large area of low pressure hung over the Norwegian Sea, whence secondary depressions passed southeastwards across Great Britain and the North Sea. Hence arose the strong and squally N. and N.W. winds of the period and the cold showers which accompanied them. In the rear of a small secondary depression, which travelled southwards and was found over Devon and Cornwall on Monday morning, April 30, the barometer rose fast, reaching 30·58 inches at Belmullet and 30·55 inches at Parsonstown and Valentia Island at 8 a.m. of Tuesday, May 1. The weather subsequently again became unsettled, and on Friday morning snow and sleet fell heavily over Scotland in connection with a deep depression lying between that country and the S.W. of Norway. At 8 a.m. of the day named the barometer read only 29·12 inches at the Norwegian station, Skudesnæs. On Saturday a new depression advanced upon our N.W. coasts, causing much cloud, with a backing of the wind to S.W. In Dublin the barometer ranged between 30·491 inches at 9 a.m. of Tuesday (wind, N.) and 29·722 inches at 9 p.m. of Saturday (wind, S.W.). The thermometers in the screen rose to 57·8 on Thursday and fell to 41·3° on Tuesday. The rainfall was ·111 inch on three days, ·070 inch being registered on Wednesday. The prevalent winds were N. and N.W.

The weather remained in an unsettled, showery, squally, chilly condition throughout the week ended Saturday, the 12th. In the British Islands the distribution of atmospheric pressure was of the cyclonic type from beginning to end of the period; but well-marked anticyclones were noticed

over France on Tuesday and over the Baltic and Scandinavia on and after Thursday. The deepest of the depressions was found off the North of Ireland on Thursday morning, when the barometer read only 29·21 inches at Malin Head. On Friday a shallow secondary depression crossed Ireland, where it caused rain and a circulation of light but very variable winds—in Dublin on the morning of this day the wind shifted to E.; it then backed to N. and finally to N.W. with a clearing sky and fast-falling temperature. Rain fell in the form of heavy showers in all parts of the kingdom, although the downpour did not reach the neighbourhood of London until Wednesday. Hail fell in several places—in Dublin on Monday—and thunder occurred at Aberdeen on Sunday, at Spurn Head on Monday and Thursday. In Dublin the mean height of the barometer was 29·781 inches; the minimal reading was 29·543 inches at 9 p.m. of Wednesday (wind, S.W.) and at 9 a.m. of Thursday (wind, W. by S.), the maximal reading was 30·225 inches, at 11 p.m. of Saturday (wind, N.W.). The corrected mean temperature was 50·3°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 50·1°. The thermometers in the screen fell to 40·4° on Saturday, having risen to 58·6° on Wednesday. The rainfall was ·336 inch on six days, ·158 inch being registered on Monday. The prevailing winds were W. and N.W.

The earlier part of the week ended Saturday, the 19th, was remarkable for the severity and persistence of a rainstorm which visited Wales, the east coast of Ireland, and to a less extent the east coast of Scotland. On the Continent and over the greater part of southern and eastern England the weather was comparatively fine, bright, and warm at the time of this rainstorm. On and after Thursday dry weather prevailed generally, with N.E. winds. Rain fell again on Saturday night. The inclement weather of the first few days was brought about by the advance over Ireland from the westward of a shallow depression on Sunday, on which day rain fell to the amount of ·50 inch at Belmullet, ·52 inch in Dublin, ·76 inch at Glasnevin Botanic Gardens, ·84 inch in the Phœnix Park, and ·61 inch at Donaghadee. At 8 a.m. of Monday the centre of this depression lay over the S.E. counties, and a complete cyclonic circulation of winds was reported from the Irish stations—N.E. at Malin Head, N. at Belmullet, N.N.W. at Valentia, W.N.W. at Roche's Point, S.S.E. in Dublin, and S.E. at Donaghadee. On this day (Whitsun-Monday) the weather held up in Dublin, but large quantities of rain fell in Wales—1·07 inches at Pembroke and 1·15 inches at Holyhead. The downpour extended to the east coasts of Ireland and Scotland later, the measurements on Wednesday morning being ·46 inch at Aberdeen, ·73 inch at Nairn, ·78 at Wick, 1·33 inches in Dublin, 1·38 inches at Glasnevin, and 1·46 inches in the Phœnix Park. Thunder and hail occurred at Valentia on Wednesday. At this time a large anticyclone was forming in the N. and repelling the depression southwards, with the result that on Thursday the rain ceased, and until almost the end of the week fine and dry but cold weather was established throughout Great Britain and Ireland. Snow fell in Scotland on Saturday. A downpour of rain often occurs in the middle of May, and—as on this occasion—is induced by the chilling of a warm, moist, southerly air-current by a cold polar current encroaching upon its left border. In Dublin the mean height of the barometer was 30·053 inches, pressure varying from 29·740 inches, at 9 a.m. of Monday (wind, S.S.E.) to 30·332 inches, at 9 a.m. of Saturday (wind, N.E.). The corrected mean temperature was 49·7°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 49·3°. On Sunday the screened thermometers fell to 41·0°, on Monday they rose to 57·8°. The rainfall was 2·617 inches on six days, the maximal daily fall was 1·330 inches on Tuesday The rainfall lasted for about 63 hours, but not continuously. The prevailing winds were S.S.E. at first, afterwards E.N.E.

The week ended Saturday, the 26th, will be memorable for its exceeding coldness and for the destructive frosts which occurred during its first three nights. At the beginning showers of hail, soft hail (Graupel), and sleet or snow, fell in many places and snow lay on the higher summits of the Dublin and Wicklow mountains. Generally speaking, however, the weather was very dry and chiefly bright, except in the east and south-east of England, where a dull, cloudy period with cold rain or passing showers prevailed throughout Tuesday and Wednesday. Depressions over Italy and in the Mediterranean Basin caused heavy rainfalls in the S. of France—at Lyons 3·65 inches fell in the seven days ending with 8 a.m. of Saturday. In Ireland and the centre of Great Britain the distribution of atmospheric pressure was for the most part anticyclonic—at 8 a.m. of Thursday the barometer read as high as 30·51 inches at Shields. At both the beginning and the close of the week, however, depressions were found over the North Sea and southern France. Hence the fresh to strong polar winds, which caused the low temperatures of the period. On Sunday night, the thermometer in the screen fell to 33° at Nairn, Aberdeen, and Dublin 32°; at Wick, Leith, and Shields, 31°; at Oxford, 30°; at Parsonstown, 29°; at Stornoway, York and Cambridge, and 28° at Loughborough. On Monday night, the minima were 28° at Wick, and 26° at Nairn and Loughborough. Much damage was done to vegetation by this untimely and unseasonable severity of frost. In Dublin the mean temperature on the grass during the week was only 31·4°, and on Monday a reading of 26·9° was recorded. The mean height of the barometer was 30·195 inches, pressure rising to 30·459 inches at 9 a.m. of Thursday (wind, E.N.E.) and falling to 29·988 inches at 3 p.m. of Saturday (wind, N.N.W.). The corrected mean temperature was 46·2°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 48·3°. On Monday the screened thermometers fell to 33·0°, on Friday they rose to 64·5°. This latter reading was the first maximum above 60° which had been recorded in this month of May. The prevalent winds were N. and N.N.E. There was no measurable rainfall. The mean temperature—46·2°—was 2·4° below that of the last week in March, 1894 (48·6°), and 4·0° below that of the week ending May 5, 1894—viz., 50·2°.

Throughout the closing period of the month—from Sunday, the 27th, to Tuesday, the 31st, inclusive—the weather remained unsettled and in a cold, showery condition. An irregularly-shaped depression, with several minima within its area, moved slowly westwards, and finally north-westwards, from North Germany across the British Islands. As this system approached, copious rains fell in the east of Great Britain, but particularly in the extreme south-east of England. At the North Foreland the rainfall for the 48 hours ending with 8 a.m. of Monday, the 28th, was no

less than 2·57 inches. At the Helder, in Holland, the corresponding measurement was still greater—namely, 3·08 inches. Very sharp nights were succeeded by showery days. Hail fell in many places, and thunder and lightning occurred on the 28th and three following days—the storms of the 30th and 31st being especially severe in several places both in Ireland and in England. In Dublin drenching showers of rain and hail fell on the afternoon of the 28th, and thunder was heard in the vicinity of the city. On the 29th, also, thunder and lightning occurred to the north-east of Dublin, where thunder was again heard on the 30th.

The rainfall in Dublin during the five months ending May 31st amounted to 12·709 inches on 90 days, compared with 7·908 inches on 66 days in 1893, 10·099 inches on 80 days in 1892, only 5·995 inches on 63 days in 1891, 11·483 inches on 76 days in 1890, 10·476 inches on 91 days in 1889, 9·068 inches on 69 days in 1888, 6·489 inches on 62 days in 1887, and a twenty-five years' average of 10·496 inches on 81·6 days.

It may be remembered that on Saturday, May 28th, 1892, 2·056 inches of rain were measured at this station, 1·900 inches having fallen within 6 hours, or at the rate of 7·6 inches in 24 hours. No such measurement had been recorded in Dublin since October 27, 1880, when 2·736 inches of rain fell. May 28, 1892, was only the third occasion within the past twenty-nine years on which the rainfall exceeded 2 inches within 24 hours in Dublin. On May 15th, in the present year, the rainfall was 1·330 inches at this station, 1·460 inches at the Ordnance Survey, Phœnix Park, and 1·380 inches at the Botanic Gardens, Glasnevin.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in May, 1894, was 3·240 inches, distributed over 15 days. Of this quantity ·900 inch fell on the 13th, and ·710 inch on the 16th. The total fall since January 1st, 1894, equals 15·696 inches on 85 days, compared with 9·565 inches on 65 days in 1893.

At Cloneevin, Killiney, Co. Dublin, the rainfall in May was 3·47 inches on 17 days, compared with a nine years' average of 2·343 inches on 15·0 days. The total fall since January 1 at this station has been 12·56 inches on 91 days. The maximal fall on any one day in May was 1·21 inches on the 15th. In 1893 only 1·12 inches fell on 10 days, but in 1892 the fall was 4·68 inches on 17 days.

JUNE.—Although somewhat cloudy and rather cool, this proved a favourable month, and its closing days were exceptionally warm and brilliant. The rainfall was frequent but not heavy, and a decided advance in the night-temperature was perceptible as compared with the frosty May of 1894. No electrical disturbances took place near Dublin. Thunder was heard at Malin Head on the 21st, and lightning was seen at Valentia Island on the 3rd.

In Dublin the arithmetical mean temperature (57·0°) was below the average (57·8°) by 0·8°; the mean dry bulb readings at 9 a.m. and 9 p.m. were 56·4°. In the twenty-nine years ending with 1893, June was coldest in 1882 (M. T.=55·8°), and in 1879 (the "cold year") (M. T.=55·9°). It was warmest in 1887 (M. T.=62·3°), in 1865 (M. T.=61·0°), and in 1868 (the "warm year") (M. T.=60·5°). In 1866 the M. T. was 57·5°; in 1888, 56·2°; in 1889, 59·5°; in 1890, 58·1°; in 1891, 59·0°; in 1892, 56·7°, and in 1893, 59·9°.

The mean height of the barometer was 29·992 inches, or 0·075 inch above the corrected average value for June—namely, 29·917 inches. The mercury rose to 30·368 inches at 9 a.m. of the 29th, and fell to 29·493 inches at 9 a.m. of the 2nd. The observed range of atmospherical pressure was, therefore, 0·875 inch—that is, less than nine-tenths of an inch.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 56·4°, or 7·2° above the value for May, 1894. Using the formula, *Mean Temp.=Min.+ (max.−min.×·465)*, the value was 56·5°, or 0·7° below the average mean temperature for June, calculated in the same way, in the twenty-five years, 1865–89, inclusive (57·2°). The arithmetical mean of the maximal and minimal readings was 57·0°, compared with a twenty-five years' average of 57·8°. On the 30th the thermometer in the screen rose to 72·8°—wind, E.N.E.; on the 6th the temperature fell to 43·1°—wind, N.E. The minimum on the grass was 36·0° also on the 6th.

The rainfall amounted to 1·652 inches, distributed over 19 days. The average rainfall for June in the twenty-five years, 1865–89, inclusive, was 1·817 inches, and the average number of rainy days was 13·8. The rainfall was, therefore, slightly below, while the rainy days were considerably above the average. In 1878 the rainfall in June was very large—5·058 inches on 19 days; in 1879 also 4·046 inches fell on 24 days. On the other hand, in 1889, only ·100 inch was measured on 6 days; in 1887, the rainfall was only ·252 inch, distributed over only 5 days; in 1874 only ·405 inch was measured on 9 days; and in 1868 only ·677 inch fell on but 6 days. In 1888 the rainfall was as much as 3·045 inches, distributed over as many as 18 days. In 1890 it was 1·930 inches on 18 days, in 1891 2·753 inches on 14 days, and in 1892 1·671 inches on 17 days, and in 1893 1·716 inches on 12 days.

High winds were noted on 8 days, but the force of a gale was attained on only one occasion—the 23rd. Temperature reached or exceeded 70° in the screen on only 2 days; compared with 17 days in 1887, only 1 day in 1888, 10 days in 1889, only 2 days in 1890, 6 days in 1891, 4 days in 1892, and 5 days in 1893. Hail fell on the 10th and 18th. Fog was observed on the 3rd, 4th, and 9th.

The first two days were changeable. Friday, the 1st, opened with a very low temperature, and was then fair to cloudy and again fair. On the morning of Saturday, the 2nd, the barometer was below 29·5 inches in a depression lying over the south of Ireland, and the weather was dull and rainy though afterwards fair.

Although the weather remained unsettled, cloudy, and showery or rainy, the week ended Saturday, the 9th, witnessed a decided advance in temperature. No high day maxima indeed were recorded, but the nights were much less cold, and there was a pleasant softness in the air. Very heavy rains were experienced at one time or another in most parts of the British Islands. On Sunday much sea fog was prevalent round our coasts, and great heat was felt in France, the thermometer rising to 97° at Biarritz, 88° at Rochefort, 82° at Lyons, and 76° in Paris. At night thunderstorms and heavy rain

prevailed in the S. and S.W. of England and S. Wales. The rainfall at Roche's Point, Co. Cork, was 1·10 inches; at Pembroke it was 1·09 inches. On Monday 2·26 inches fell at Donaghadee, and ·99 inch at both York and Oxford. On Wednesday a depression travelled in a curve from the Bay of Biscay up the English Channel, reaching North Germany by Thursday morning when a violent thunder and hail storm swept across Austria. This system again caused heavy rains, ·85 inch being registered at Prawle Point, Devon, ·83 inch at Dungeness, ·80 inch at the North Foreland, and 1·00 inch at Sittingbourne, in Kent. Showery conditions held to the end of the week. In Dublin the mean height of the barometer was 29·856 inches, pressure ranging from 29·663 inches at 9 p.m. of Monday (wind, N.N.W.) to 29·969 inches at 9 p.m. of Thursday (wind, W. by N.). The corrected mean temperature was 53·8°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 53·3°. On Wednesday the screened thermometers sank to 43·1°, on Thursday they rose to 63·0°. The rainfall was ·570 inch on six days, ·384 inch being measured on Monday. The wind was variable in direction, E.N.E. being the most prevalent point.

As regards the week ended Saturday, the 16th, it is to be noted that although at first cold, changeable, and showery as in past weeks, the weather became much warmer and finer on Wednesday, and Saturday proved a perfect summer's day. A very striking feature of the period was the prevalence of great heat in the extreme North of Europe until after Wednesday—at Haparanda, on the Gulf of Bothnia, the daily maxima were—Sunday, 73°; Monday, 75°; Tuesday, 77°; and Wednesday, 75°. The corresponding figures at Munich, 15° further south, were 66°, 61°, 55°, and 57°. This anomalous distribution of temperature was brought about by a tendency to the formation of areas of high atmospheric pressure (anticyclones) both in the far North of Europe and over the Bay of Biscay and the Peninsula. Between these high pressure systems numerous areas of low pressure moved slowly eastwards across Scotland, the North Sea, and the southern portion of the Baltic, causing clouds, variable winds, and frequent showers within the limits of their influence. In Dublin heavy local showers fell on the first three days, and hail was observed shortly after noon on Sunday. On Wednesday a brisk rise of temperature took place, continuing to the close of the week, with the exception of a few hours on Friday night, when a short cold spell occurred under a clear sky and with a calm atmosphere. The mean height of the barometer was 30·009 inches, pressure ranging between 29·749 inches at 3 p.m. of Monday (wind, N.W.) and 30·177 inches at 9 a.m. of Thursday (wind, W.). The corrected mean temperature was 55·5°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 55·7°. On Saturday the shade thermometers rose to 69·2°. On Wednesday they fell to 44·2°. The rainfall was ·242 inch on five days, ·111 inch being measured on Sunday. The prevailing wind was N.W. Rain fell heavily in the S.E. of England on Friday evening.

Although changeable and far from settled, the weather of the week ended Saturday, the 23rd, was favourable to both health and vegetation. There was again a distinct advance in temperature, but no excessive summer heat was felt—at least in the British Islands. The sky was often clouded, and rain fell at times—copiously in Ireland on Monday, in Scotland on Tuesday, and in many parts of England on Wednesday. A fine, warm spell followed, so that on Friday the shade temperature reached 71° in Dublin, 72° in London and at York and Loughborough, and 74° at Cambridge. Saturday was not so fine, owing to the advance of an atmospheric depression over Ireland from S.W. In the evening a moderate westerly gale prevailed for a short time. The prevalence of remarkable heat in the extreme north of Europe has once more to be chronicled—the maxima at Haparanda (Lat. 65° 50′ N.) were—73°, 73°, 82°, 77°, 75°, 79°, and 75°. The general arrangement of atmospheric pressure was anticyclonic over the Peninsula, France, and—at times—Germany; cyclonic over the British Isles and Scandinavia. On Monday morning a large secondary depression was found over Leinster, the Irish Sea, and St. George's Channel. Its presence was accompanied by low temperatures and a heavy rainfall. On Wednesday a series of V-shaped depressions passed across Great Britain, causing a good deal of rain in many parts of that island. Summer heat was enjoyed on Friday and Saturday. In Dublin the mean height of the barometer was 29·934 inches, pressure varying between 30·127 inches at 9 a.m. of Thursday (wind, S.S.W.) and 29·690 inches at 9 a.m. of Monday (wind, S.S.E.). The corrected mean temperature was 57·1°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 56·5°. On Friday the thermometer rose to 70·7°, and on Tuesday it fell to 44·9° in the screen. The rainfall was ·593 inch on four days, ·408 inch being measured on Sunday. The prevailing wind was W.S.W.

During the week ended Saturday, the 30th, the weather, while cloudy and dull, with fresh westerly winds, at first, improved daily, and after Wednesday cloudless skies, moderate and cool easterly breezes and brilliant sunshine were enjoyed. At the beginning of the week a depression of some importance—its minimal pressure being at first below 29·40 inches—was crossing Scandinavia in a south-easterly direction. Some secondary areas of low pressure at the same time passed over the British Isles from west to east, with the result that the wind was strong and gusty from westerly points, the sky was densely clouded, and showers fell more or less heavily at many stations in Ireland, Scotland, and the northern half of England. By Tuesday morning an anticyclone had formed over Ireland and England in the rear of the disturbances. This system developed and spread northwards over Scotland and the Norwegian Sea, so that light to moderate easterly winds became general, while the sky cleared, although the atmosphere remained hazy until Saturday. On this day the fine weather culminated in brilliant sunshine and great heat. In London the shade temperature touched 80° on Thursday and also on Friday, and reached 82° on Saturday. In Dublin a refreshing sea-breeze subdued the sun's heat, but nevertheless the maximum on Saturday was 72·8°. The mean height of the barometer was 30·253 inches, pressure ranging from 29·967 inches at 9 a.m. of Sunday (wind, W.) to 30·368 inches at 9 a.m. of Friday (wind, E.). The corrected mean temperature was 60·4°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 61·1.° On Saturday the thermometer rose to 72·8° in the shade; on Sunday it fell to 49·0°. The rainfall was 0·016 inch on two days, ·008 inch being measured on both Sunday and Monday. The prevalent winds were first W., then E.

The rainfall in Dublin during the six months ending June 30th amounted to 14·361 inches on 109 days, compared with 9·624 inches on 78 days in 1893, 11·770 inches on 97 days in 1892, 8·748 inches on 77 days in 1891, 13·413 inches on 94 days in 1890, 10·576 inches on 97 days in 1889, 12·113 inches on 87 days in 1888, 6·741 inches on 67 days in 1887, and a twenty-five years' average of 12·313 inches on 95·4 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in June, 1894, was 1·685 inches, distributed over 11 days. Of this quantity ·560 inch fell on the 17th, and ·350 on the 4th. The total fall since January 1 has been 17·381 inches on 96 days, compared with 11·776 inches on 75 days during the corresponding period in 1893.

The rainfall at Cloneevin, Killiney, Co. Dublin, amounted to 1·56 inches on 14 days. The greatest fall in 24 hours was ·42 inch on the 4th. The average rainfall for June in 9 years was 1·448 inches on 11·4 days. Since January 1, 1894, 14·12 inches of rain have fallen at this station on 105 days, the average rainfall for the six months ending June 30 having been in nine years 10·561 inches on 79 days.

JULY.—A very changeable, showery, and thundery, but tolerably warm month, of average mean temperature but considerable rainfall, with a decided prevalence of winds from westerly points—W., N.W., and S.W.; but easterly winds towards the close.

In Dublin the arithmetical mean temperature (60·3°) was slightly below the average (60·6°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 59·1°. In the twenty-nine years ending with 1893, July was coldest in 1879 (the "cold year") (M. T. = 57·2°). It was warmest in 1887 (M. T. = 63·7°), and in 1868 (the "warm year") (M. T.=63·5°). In 1886 the M. T. was 61·0°; in 1888 it was as low as 57·3°; in 1889 it was 58·7°; in 1890, 58·1°; in 1891, 59·0°; and in 1892, 57·8°. and in 1893, 61·6°. From this, July, 1887, proves to have been the warmest since the present records commenced, whilst July, 1879, was the coldest. In only 2 years since 1864 was July colder than in 1892.

The mean height of the barometer was 29·853 inches, or 0·062 inch below the corrected average value for July—namely, 29·915 inches. The mercury marked 30·211 inches at 9 a.m. of the 1st and fell to 29·309 inches at 9 p.m. of the 11th. The observed range of atmospherical pressure was, therefore, 0·902 inch—that is, a little more than nine-tenths of an inch.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 59·1°, or 2·7° above the value for June, 1894. Using the formula, *Mean Temp.* = *Min.* + (*max.*—*min.* × ·465), the value was 59·8°, or 0·4° below the average mean temperature for July, calculated in the same way, in the twenty-five years, 1865–89, inclusive (60·2°). The arithmetical mean of the maximal and minimal readings was 60·3°, compared with a twenty-five years' average of 60·6°. On the 1st the thermometer in the screen rose to 75·7°—wind, S.E.; on the 23rd the temperature fell to 48·3°—wind, N. The minimum on the grass was 43·4° on the 22nd.

The rainfall was 3·772 inches, distributed over 21 days. The average rainfall for July in the twenty-five years, 1865–89, inclusive, was 2·420 inches, and the average number of rainy days was 17·2. The rainfall, therefore, was considerably above the average, while the rainy days were also much above it. In 1880 the rainfall in July was very large—6·087 inches on 24 days; in 1871 also 4·391 inches fell on 28 days. On the other hand, in 1870, only ·539 inch was measured on 8 days; in 1869, the fall was only ·739 inch on 9 days, and in 1868, only ·741 inch fell on but 5 days. In 1892, 1·952 inches fell on 12 days, and in 1893, 2·042 inches on 14 days.

High winds were noted on 7 days, but attained the force of a gale on only one occasion.—the 18th. Temperature reached or exceeded 70° in the screen on only 3 days. In July, 1887, temperature reached or exceeded 70° in the screen on no fewer than 17 days. In July, 1888, the maximum was only 68·7°. In July, 1891, maxima of 70° were reached on only 3 days, and in July, 1892, on only 2 days; but in 1893, 70° was reached on 8 days. Electrical disturbances were frequent. A severe thunderstorm occurred on the night of the 25th-26th, when also hail fell. Thunder was also heard on the 1st, 7th, 20th, and 24th, while lightning was seen on the 1st, 24th, and 25th. A parhelion appeared on the evening of the 25th.

The weather of the week ended Saturday, the 7th, while generally warm and summerlike, was unsettled, particularly in Ireland and Scotland, where rain fell heavily at times. Sunday was an unusually hot day—the thermometer in the shade rose to 87° at Cambridge, 83° at Oxford, Loughborough and even Holyhead, 82° in London, 81° at Liverpool, 80° at York, Hurst Castle, and Belmullet, 79° at Parsonstown, 78° at Ardrossan, and 76° in Dublin. In the evening thunderstorms prevailed in St. George's Channel and over the Irish Sea, as well as at Jersey, where 1·10 inches of rain fell. Off the coasts of Wicklow and Dublin thunder was frequently heard between 6 and 8 p.m., and lightning flashed from splendid storm-clouds after dusk. After a dull spell on Monday, the weather again became fair for a time, but on Wednesday a considerable fall of rain occurred in the S., W., and N. of Ireland—the measurement at Valentia Island was 1·42 inches. At that station 1·43 inches again fell on Thursday, a total fall of 2·85 inches in 48 hours. On Friday the rainfall was renewed in Ireland and a thunderstorm depression passed over England. At 8 a.m. of this day the thermometer stood as high as 74° in London, where the maximum proved to be 85°. Saturday was much cooler, but very changeable, with heavy local thundershowers. Thunder was heard to the eastward of Dublin at 2 and again at 3 p.m. The evening proved fair, but cold. In Dublin the mean atmospheric pressure during the week was 30·036 inches, the barometer being seen to range from 30·211 inches at 9 a.m. of Sunday (wind, E.S.E.), to 29·791 inches at 6 p.m. of Friday (wind, W.S.W.). The corrected mean temperature was 62·1°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 61·0°. On Sunday the screened thermometers rose to 75·7°. On Saturday they fell to 50·7°. The rainfall was ·417 inch on five days, ·202 inch being measured on Friday. The prevailing wind was S.W. Thunder was heard on Sunday and Saturday.

The weather remained in a very unsettled, showery state throughout the week ended Saturday, the 14th. The type of distribution of atmospheric pressure was cyclonic, and at one time—on Thursday morning—the barometer was as low as 29·00 inches off the S.W. coast of Norway. Owing to frequent rain and the clouded state of the sky no very high temperatures were recorded at any British or Irish station. On the Continent, however, it was very hot at times—at Perpignan the thermometer rose to 91° on Monday and to 90° on Tuesday. The most striking episode in the history of the week's weather was the erratic course pursued by an extensive and deep depression, which lay near the Scilly Isles at 8 a.m. of Tuesday. This disturbance first travelled southeastwards to Brittany, thence northeastwards to the North Sea off the Dutch coast, reaching this position by 8 a.m. of Wednesday after causing a downpour of rain on both sides of the English Channel—1·64 inches were measured at Jersey, 1·46 inches in London, and 1·22 inches at Cap Griz Nez on Wednesday morning. By 6 p.m. of this day the centre of the depression, which had become much deeper, touched the Danish coast near Fano. Next morning it was off the extreme southwestern part of Norway, having again changed its course. Twenty-four hours later it was found over Caithness, torrents of rain having fallen in the North of Scotland as it approached. On Saturday this curious system was rapidly filling up. In Dublin the mean height of the barometer was only 29·584 inches, or as much as ·452 inch below the corresponding value for the previous week. The highest recorded pressure was 29·974 inches at 9 a.m. of Sunday (wind, W. by S.), the lowest was 29·309 inches at 9 p.m. of Wednesday (wind, S.W.). The corrected mean temperature was 58·2°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 57·3°. On Friday the screened thermometers rose to 67·7°, on Thursday they fell to 50·9°. Rain fell daily to the total amount of ·745 inch, ·309 inch being measured on Wednesday, when ·610 inch fell at Greystones—·560 inch in one or two heavy showers, The prevalent wind was westerly.

Unsettled, showery, squally, cool—such was the weather of the week ended Saturday, the 21st. A tongue of relatively high pressure was found on most days stretching across France and Germany in an east-north-easterly direction, but a series of depressions—some of considerable size—continued to pass over the northern half of the British Isles, the North Sea, and Scandinavia from W. to E., or from W.S.W. to E.N.E. Hence the changeable weather of the period. Sunday was tolerably fine after a showery morning; but at night a new depression caused a considerable rainfall, which on Monday extended to Great Britain. On Tuesday gradients for westerly winds were steep over Ireland and England, and the wind became strong to a moderate gale at exposed stations. In Scotland neither was the barometric gradient steep nor was the wind high, but a heavy downpour of rain occurred—1·08 inches being registered at Aberdeen, 1 inch at Stornoway, and 0·9 inch at Wick on Wednesday morning. On Friday heavy thundershowers occurred to the southward of Dublin, but both on that day and again on Saturday intervals of hot sunshine were enjoyed in the city itself. In Dublin the mean height of the barometer was 29·770 inches, pressure ranging between 29·922 inches at 9 a.m. of Sunday (wind, N.W.) and 29·643 inches at 9 a.m. of Wednesday (wind, N.W. by W). The corrected mean temperature was 59·2°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 57·8°. On Saturday the screened thermometers rose to 68·6°. The minimum was 52·0° on Wednesday and Saturday. Rain measured ·341 inch on five days—·118 inch falling on both Sunday and Wednesday. The prevailing wind was W.N.W.

During the week ended Saturday, the 28th, the weather was in an unsettled, thundery state until Thursday, when a fine, summerlike spell set in, lasting to the close of the week. All through the period an area of high atmospheric pressure—at first of feeble, afterwards of greater intensity—lay over Norway and the adjoining Norwegian Sea. But in the British Islands the distribution of pressure conformed to the cyclonic rather than the anticyclonic type. On Sunday an irregular depression passed eastwards across the south of Ireland to the south of England, over which district it caused heavy rains on Sunday night and Monday morning—·68 inch at Cambridge, ·77 inch at Oxford, ·85 inch in the Scilly Islands, and ·98 inch at Prawle Point, in Devon. Near Dublin, beautiful weather prevailed at this time, but rainclouds were seen on the far southern horizon. During the following three days a large, and irregular though shallow depression travelled slowly northwestwards from the Bay of Biscay to Ireland, being still perceptible off the coasts of Cork and Kerry on Saturday morning. This system caused downpours of rain and severe thunderstorms in many places. On Tuesday night 1·27 inches of rain fell at Greystones, Co. Wicklow; 1·56 inches in Dublin; 1·67 inches at Glasnevin, North Dublin, and 1·85 inches at the Ordnance Survey Office, Phœnix Park. On Wednesday night and early on Thursday morning a violent thunderstorm passed over the Counties of Dublin and Wicklow from S.E. towards N.W. Rain and hail fell in large quantities, and the lightning was frequent and most vivid. On Thursday forenoon the weather cleared, remaining bright and warm, with S.E. winds, to the end of the week. In Dublin the mean atmospheric pressure was 29·967 inches, the barometer oscillating between 29·874 inches, at 9 p.m. of Thursday (wind E.S.E.), and 30·125 inches at 9 a.m. of Tuesday. (wind, N.E.). The corrected mean temperature was 59·2°, The mean dry bulb reading at 9 a.m. and 9 p.m. was 59·0°. On Saturday the screened thermometers rose to 68·7°, having fallen to 48·3° on Monday. The rainfall was as much as 2·145 inches on three days—1·560 inches being recorded on Tuesday. The prevailing winds were N.E. and S.E. On Tuesday the thermometer rose to 95° in the shade at Berlin.

The last three days of the month were in unison with the prevailing characters of July, 1894—changeable, but fairly warm and summerlike. On Sunday, the 29th, a thunderstorm depression lay over the English Channel, the South of England, and South Wales. In Dublin, gloomy, damp weather held, but there were severe thunderstorms along the shores of the English Channel. Monday was warm and brilliant. On Tuesday, the 31st, a new area of low pressure advanced over Ireland from the Atlantic, causing clouds and heavy rain at times.

The rainfall in Dublin during the seven months ending July 31st amounted to 18·133 inches on 130 days compared with 11·666 inches on 92 days in the corresponding period of 1893, 13·722

inches on 109 days in 1892, 10·935 inches on 92 days in 1891, 15·587 inches on 118 days in 1890, 13·146 inches on 112 days in 1889, 15·994 inches on 109 days in 1888, 7·935 inches on 80 days in 1887, and a twenty-five years' average of 14·733 inches on 112·6 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in July was 3·805 inches on 19 days, compared with 1·290 inches on 15 days in 1893, 2·925 inches on only 10 days in 1892, 1·325 inches on 18 days in 1891, and 1·489 inches, distributed over 18 days, in 1890. Of the total rainfall 1·270 inches fell on the 24th, and ·640 inch on the 25th. The total fall since January 1 has been 21·186 inches on 115 days, compared with 13·066 inches on 90 days in 1893, and 16·708 inches on 90 days in 1892.

At Cloneevin, Killiney, Co. Dublin, the rainfall in July was 4·08 inches on 23 days, compared with a nine years' average of 1·807 inches on 15 days. On the 24th the rainfall was 1·17 inches. Since January 1, 1894, 18·20 inches of rain have fallen on 128 days at this station (Cloneevin).

The July rainfall now recorded has been exceeded at Cloneevin only in 1888, when it was 4·09 inches on 22 days.

AUGUST.—A month of singularly cloudy skies, low mean temperature, north-westerly winds, and a heavy rainfall. August, 1893, had proved a record month as regards high temperature. On no fewer than 14 days did the thermometer exceed 70° in the shade during that month, and the arithmetical mean temperature was 63·0°, or 3·3° above the average, and 1·0° above that of August, 1891, when it reached 62·0°. In marked contrast to these temperature values, we find that not once in August, 1894, did the thermometer reach 70° in the shade, while it failed to reach even 60 on as many as six out of the last seven days of the month. Again, the arithmetical mean temperature fell 1·8° short of the average—57·9° compared with 59·7°. The nights were, however, not cold. It was owing to the clouded state of the sky and a consequent failure of solar radiation that the month proved so cool. The percentage of cloudiness was 75·8—at 9 a.m., 80·6; at 9 p.m., 70·1.

In Dublin the arithmetical mean temperature (57·9°) was much below the average (59·7°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 56·9°. In the twenty-nine years ending with 1893, August was coldest in 1881 (M. T.=57·0°), and warmest in 1893 (M. T.=63·0°). In 1885, the M. T. was only 57·1°; in 1879 (the "cold year"), it was 57·7°; in 1887, 60·3°; in 1888, 58·2°; in 1889, 58·6°; in 1890, only 57·2°; in 1891, 58·1°; in 1892, 60·0°; and in 1893, 63·0.°

The mean height of the barometer was 29·916 inches, or 0·019 inch above the corrected average value for August—namely, 29·897 inches. The mercury marked 30·304 inches at 9 a.m. and also at 9 p.m. of the 29th, and fell to 29·432 inches at 9 a.m. of the 15th. The observed range of atmospheric pressure was, therefore, ·872 inch—that is, a little less than nine-tenths of an inch.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 56·9°, or 4·4° below the value in August, 1893. It was also 2·2° below the value for July, 1894. Using the formula, *Mean Temp.* = *Min.* + (*max.*—*min.* × ·47), the mean temperature was 57·6°, or 1·7° below the average mean temperature for August, calculated in the same way, in the twenty-five years, 1865–89, inclusive (59·3°). The arithmetical mean of the maximal and minimal readings was 57·9°, compared with a twenty-five years' average of 59·7°. On the 8th the thermometer in the screen rose to 67·9°—wind, W.S.W.; on the 20th and again on the 22nd the temperature fell to 47·1°—wind, northerly and north-westerly. The minimum on the grass was 42·8° on the 22nd.

The rainfall was 3·726 inches, distributed over 18 days. The average rainfall for August in the twenty-five years, 1865–89, inclusive, was 2·825 inches, and the average number of rainy days was 15·5. The rainfall, therefore, and also the rainy days were considerably in excess of the average. In 1874, the rainfall in August was very large—4·946 inches on 18 days; and in 1868 also 4·745 inches fell on, however, only 13 days; but the heaviest downpour in August occurred in 1889, when 5·747 inches were registered on 22 days. On the other hand, in 1884, only ·777 inch was measured on 8 days. In 1887, 1·520 inches of rain fell on 16 days; in 1888, 1·270 inches on 12 days; in 1890, 2·799 inches on 19 days; in 1891, 4·953 inches on 25 days; in 1892, 3·557 inches on 22 days; and in 1893, 2·713 inches on 16 days.

High winds were noted on as many as 13 days, and attained the force of a gale on two occasions —namely, the 10th and 14th. Thunder was heard on the 2nd. Temperature failed to reach 70° in the screen on any day. Hail fell on the 8th. A lunar halo was seen on the 21st.

The weather remained changeable and showery, with fresh westerly (S.W. to N.W.) winds, throughout the period ended Saturday, the 4th. On Tuesday, July 31st, a new area of low pressure advanced over Ireland from the Atlantic, causing clouds and heavy rain at times. This system gradually developed into a well-marked cyclone, which was found off the coast of Yorkshire at 8 a.m. of Friday, the 3rd, and in the centre of which the barometer was apparently at the time named slightly below 29·30 inches. Heavy showers attended the passage of this depression, and thunder occurred at times in various places. In front of the centre, gradients were slight, and the wind was only light or moderate in force—in its rear, however, the steepness of gradient was much more decided, and the north-westerly winds were correspondingly strong. Indeed, on Friday morning moderate gales from W. to N.W. were reported from Liverpool and Holyhead. Connected with this disturbance, a rainfall of 1·44 inches was measured at Aberdeen (where the direction of the wind was N. E.) on Friday, at 8 a.m. A secondary low pressure system caused a renewal of showers and fresh westerly winds on Saturday. In Dublin the barometer fell to 29·525 inches at 4.20 p.m. of Friday (wind, N.W.). On Wednesday the shade thermometers rose to 67·8°, on Friday they fell to 49·9°. The rainfall was ·168 inch on three days, ·109 inch being measured on Thursday. The wind was westerly (between S.W. and N.W.). Thunder was heard near Dublin on Thursday afternoon.

All through the period ended Saturday, the 11th, as in past weeks, the weather over North-western Europe was in a changeable, showery, and windy condition. There were, no doubt, frequent intervals of bright sunshine and genial warmth, but these were rudely broken in upon by squalls and drenching thundershowers of very local distribution. Two such showers fell over Dublin on

Sunday afternoon, yielding more than a quarter of an inch of rain. In the course of the following night a shallow secondary depression appeared at the mouth of English Channel, whence it travelled eastward to the Straits of Dover. This system caused beautiful weather in Ireland on Monday—"Bank Holiday"—but a considerable fall of rain over the greater part of England. On Tuesday a new primary depression advanced over Ireland and Scotland from W.S.W. At 8 a.m. of Wednesday the barometer was down to 29·41 inches at Stornoway, and by 1 p.m. it receded to 29·52 inches even in Dublin, where torrents of rain with hail fell at 5 p.m. On Thursday also there were very heavy showers in places, and thunder and lightning occurred about 6 p.m. off the coast of Wicklow. At night the wind veered and rose to a moderate gale from N.N.W. On Friday a ridge of high pressure lay over Ireland, the barometer rising to 30·30 inches at Valentia Island, but next day the barometer gave way again, and the wind backed towards W., with dull cool weather. In Dublin the mean height of the barometer was 29·830 inches. Pressure ranged between 29·520 inches at 1 p.m. of Wednesday (wind, W.) and 30·190 inches at 9 p.m. of Friday (wind, N.W.). The corrected mean temperature was 58·4°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 57.9°. On Wednesday the screened thermometers rose to 67·9°; on Friday they fell to 50·2°. The rainfall was ·806 inch on four days, ·344 inch being registered on Wednesday. The prevalent winds were westerly (between S.W. and N.W.).

Cyclonic conditions prevailed over North-western Europe throughout the week ended Saturday, the 18th. The weather was consequently unsettled, with rather low temperature, clouded skies, strong westerly and north-westerly winds, and frequent showers. In Ireland, however, the rainfall was happily not so heavy or persistent as in previous weeks. At the beginning of the period the centre of a depression was found near the Shetlands, where the barometer read 29·55 inches, while it stood as high as 30·32 inches at Lorient in Brittany. Fresh to strong westerly winds and showers prevailed. At 8 a.m. of Monday the depression was off the extreme south of Norway. It had grown deeper—the minimum now being 29·30 inches. This system was quickly followed by another depression, which lay directly over Scotland on Wednesday morning, the barometer being down to 29·13 inches at both Aberdeen and Leith at 8 a.m. This disturbance caused moderate to fresh gales at exposed stations—first from S.W., afterwards from N.W., and large quantities of rain fell in Scotland and the Shetlands. During the two days following, the depression moved away slowly towards N.E., and finally northwards, but the strong cold N.W. winds belonging to it continued to blow until the end of the week. Indeed, the very decided rise of the barometer in the S.W. maintained steep gradients for N.W. winds all over the British Islands. In Dublin the mean atmospheric pressure was 29·892 inches, the barometer ranging between 29·432 inches at 9 a.m. of Wednesday (wind, W.N.W.), and 30·178 inches at 9 p.m. of Friday (wind also W.N.W.). The corrected mean temperature was 57·5°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 57·0°. On Monday, the screened thermometers rose to 65·7°; on Thursday they fell to 48·1°. The rainfall was ·340 inch on six days, ·150 inch being measured on Monday. The prevailing winds were W. and N.W.

During the week ended Saturday, the 25th, atmospheric pressure was in an extremely unstable condition over North-western Europe, and the weather was consequently most changeable. At the beginning, an area of high pressure lay over the Bay of Biscay and Western France; at the close, an irregular depression was found almost in this same position. Until Wednesday, gradients for N.W. and W. winds existed in the British Isles—afterwards, a number of shallow depressions off the South of Ireland and in the neighbourhood of the English Channel produced easterly winds and downpours of rain over the southern half of the United Kingdom. On Sunday from six to eight-tenths of an inch of rain fell over the North of Scotland, in connection with a depression which travelled south-eastwards to Holland. Fresh, cool N.W. winds blew in Ireland, where very little rain fell at this time. On Tuesday the barometer gave way unsteadily, and a shallow secondary depression formed over St. George's Channel. The immediate effect of the equalisation of pressure thus caused was a spell of fair, though cool, weather in Ireland. A lunar halo at night was followed by unusual visibility and looming on Wednesday. This, in turn, ushered in a rainstorm of considerable violence—·96 inch falling in London, ·95 inch in Dublin, and 1·15 inches at Greystones, Co. Wicklow. Dull weather, with freshening easterly winds, then held to the close of the week. On Saturday night there was a still more violent rain storm. In Dublin the mean height of the barometer was 29·935 inches, pressure ranging between 29·752 inches at 5.45 p.m. of Tuesday (wind W.N.W.) and 30·139 inches at 9 a.m. of Saturday (wind, E.N.E.). The corrected mean temperature was 56·8°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 56·5°. On Sunday the screened thermometers rose to 66·0°. On Monday and also on Wednesday they fell to, 47·1°. The rainfall was 2·324 inches on four days, ·499 inch being measured on Thursday and ·451 inch on Wednesday, but no less than 1·369 inches as the result of the rain storm of Saturday night, when 2·130 inches were measured at Greystones. The prevailing winds were—first, N.W., then E.N.E.

The weather underwent a complete change at the beginning of the week ended Saturday, September 1. Rain ceased to fall and conditions became very quiet, with dull, leaden skies, and light to moderate winds—at first from N., afterwards from N.W. or W. There was but a small diurnal range of temperature over an overcast sky in Ireland and many parts of Great Britain. This very decided change was brought about by the formation of an anticyclone over Ireland, where the barometer readings reached or slightly exceeded 30·30 inches on Tuesday and Wednesday. On the latter day the high pressure area spread out as a long, broad ridge to Central Europe. Within this area of dense air much cloud, or haze and fog, prevailed, and the winds were light and variable. To the northward of it, there were freshening westerly winds and some rain; to the southward, the wind was easterly, with bright skies and a wide diurnal range of temperature. On Thursday the thermometer is reported to have risen in the shade to 100° at Rochefort, on the west coast of France, and to 90° at Perpignan, Pyrénées Orientales. At this time, hot sunshine was at intervals enjoyed in the centre and south-east of England, but scarcely a break in the cloud canopy over Ireland was

observed. At the Ordnance Survey Office, Phœnix Park, Dublin, the total registration of bright sunshine during the week amounted to only 0·8 of an hour. On Sunday night much lightning had been seen in the south of England, and it was at this time that the only rainfall of the week in Dublin occurred. In this city the mean atmospheric pressure of the week (including Saturday, September 1) was 30·186 inches, the barometer rising from a minimum of 29·931 inches, at 9 a.m. of Sunday (wind E.) to a maximum of 30·304 inches at both 9 a.m. and 9 p.m. of Wednesday (wind, N. by W. and N.W., respectively). The corrected mean temperature was 56·5°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 55·9°. On Wednesday the screened thermometers rose to 61·7°. On Tuesday they fell to 50·7°. The rainfall was ·088 inch on Sunday. The prevailing winds were—first N., then N.W. and W.

The rainfall in Dublin during the eight months ending August 31st amounted to 21·859 inches on 148 days compared with 9·455 inches on 96 days during the same period in 1887, 17·264 inches on 121 days in 1888, 18·893 inches on 134 days in 1889, 18·386 inches on 137 days in 1890, 15·888 inches on 117 days in 1891, 17·279 inches on 131 days in 1892, 14·379 inches on 108 days in 1893, and a twenty-five years' average of 17·558 inches on 128·1 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in August, 1894, was 4·020 inches distributed over 16 days. Of this quantity 2·130 inches fell on the 25th, in addition to ·760 inch on the 23rd, and ·550 inch on the 22nd. The total fall since January 1 amounts to 25·206 inches on 131 days, compared with 16·341 inches on 106 days in 1893, and 21·296 inches on 108 days in 1892.

SEPTEMBER.—As in 1893, so in 1894, September proved a favourable month throughout. The most remarkable feature in the month was the tendency to the formation of anticyclones over Ireland. These high pressure systems produced quiet, cool weather, with an overwhelming prevalence of northerly to easterly winds, and a very scanty and infrequent rainfall. In England, as usually happens with N., N.E., and E. winds, the precipitation was much greater, and heavy rainfalls occurred locally—for example, at Hereford, where 2½ inches fell between the 23rd and 25th, and at High Wycombe, Bucks, where 2¾ inches fell in an hour and a half on the 23rd. The amount of cloud was very large for September, which is often characterised by clear skies. For this reason the day temperatures were low, while no very low night temperatures were recorded—the lowest of all was 30° at Loughborough on the 28th and 29th.

In Dublin the arithmetical mean temperature (53·8°) was exactly 2° below the average (55·8°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 52·9°. In the twenty-nine years ending with 1893, September was coldest in 1886 and in 1882 (M. T.=53·0°), and warmest in 1865 (M. T.=61·4°). In 1880, the M. T. was as high as 58·6°; in 1879 (the "cold year"), it was 54·3°; in 1887, 54·0°; in 1888, 54·4°; in 1889, 55·8°, or exactly the average; in 1890, it was as high as 59·6°; in 1891, it was 57·6°; in 1892, 54·5°, and in 1893, 55·9°. So warm a September as that of 1890 had not occurred for a quarter of a century.

The mean height of the barometer was 30·213 inches, or 0·303 inch above the corrected average value for September—namely, 29·910 inches. The mercury rose to 30·509 inches at 9 a.m. of the 30th, and fell to 29·768 inches at midnight of the 22nd–23rd. The observed range of atmospheric pressure was, therefore, ·741 inch—that is, a little less than three quarters of an inch.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 52·9°, or exactly 4° below the value for August, 1894. Using the formula, *Mean Temp.* $= Min. + (max. - min. \times \cdot 476)$, the mean temperature was 53·5°, or exactly 2° below the average mean temperature for September, calculated in the same way, in the twenty-five years, 1865–89, inclusive (55·5°). The arithmetical mean of the maximal and minimal readings was 53·8°, compared with a twenty-five years' average of 55·8°. On the 10th, the thermometer in the screen rose to 63·9°—wind, W.; on the 28th the temperature fell to 39·8°—wind, E. The minimum on the grass was 33·2° also on the 28th.

The rainfall was only ·442 inch, distributed over 8 days—the rainfall and rainy days were thus considerably below the average. The average rainfall for September in the twenty-five years, 1865–89, inclusive, was 2·176 inches, and the average number of rainy days was 14·7. In 1871, the rainfall was very large—4·048 inches on, however, only 13 days. On the other hand, in 1865, only ·056 inch was measured on but 3 days. In 1888, the rainfall was only ·728 inch on 10 days; in 1889, 1·043 inches fell on 13 days; in 1890, 2·469 inches on 14 days; in 1891, 2·132 inches on 18 days; in 1892, 2·631 inches on 19 days; and in 1893, ·729 inch on 14 days.

High winds were noted on only two days, but attained the force of a gale on no occasion in Dublin. Lightning was seen on the 4th. The atmosphere was foggy on the 12th, 13th, 14th, 29th, and 30th.

The month opened with an irregularly-shaped area of high atmospheric pressure lying over Great Britain and Ireland, where the weather was mild and fine, although rather cloudy. Light variable winds were prevalent in nearly all parts of the United Kingdom.

During the week ended Saturday, the 8th, favourable autumnal weather prevailed in Ireland, but in England conditions were less settled and heavy thunder and hail showers by day succeeded a series of clear, cold, almost frosty nights. On parts of the east coast of Ireland similar conditions in a minor degree were experienced on some days. Sunday found an anticyclone off the north of Ireland and to the westward of Scotland, while a shallow but deepening depression was advancing from the Bay of Biscay to the English Channel. This system caused thunderstorms and heavy rains in the South of England—78 inch of rain falling at Hurst Castle. In Dublin this day proved fine with the lower clouds and wind coming from N.E., while lofty cirrus cleared off from W.N.W. During the next four days an area of high pressure lay over Ireland, accompanied by northerly winds, cold nights, and fair to showery days. But the showers were local, and much bright sunshine

was enjoyed. On Thursday, a singularly heavy but very partial shower fell over the south-eastern district of Dublin. At this station, ·075 inch of rain fell in a few minutes. On Friday, a depression, secondary to a more extensive and serious disturbance over Scandinavia, advanced over Ireland, causing a considerable rainfall at night. At Eastbourne 2 inches fell in 7 hours, including ·5 inch in 5 minutes at 7.30 a.m. of Saturday. As the depression passed south-eastwards, the wind drew again into N., with a clearing sky and dry bracing atmosphere. Inland very low temperatures were recorded this week—for example, the minima at Parsonstown were 53°, 39°, 38°, 38°, 38°, 37°, and 40° respectively. In Dublin the mean atmospheric pressure was 30·153 inches, the barometer ranging only from 30·235 inches at 9 a.m. of Thursday (wind, N.) to 30·019 inches at 9 p.m. of Friday (wind, W.). The corrected mean temperature was 52·1°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 51·3°. On Sunday the screened thermometers rose to 61·5°. On Thursday they fell to 42·0°. The rainfall was ·241 inch on three days, ·156 inch falling on Friday night. The prevailing winds were northerly (N.E. to N.W.). Hail fell on Tuesday and lightning was seen during the evening of the same day.

So far as Ireland is concerned, the week ended Saturday, the 15th, was a quiet, uneventful period, fine, dry weather being everywhere prevalent, except on the extreme N. and N.W. coasts, where rain fell in small quantities from time to time. An area of high pressure overlay this country throughout the week, causing the fine weather but at the same time much haze or fog and at times cloud. Atmospheric pressure was highest on Sunday evening, when the barometer read 30·53 inches at Parsonstown—at 8 a.m. next day, the value 30·51 inches was recorded at that station and also at Valentia Island and Roche's Point. In the south-east of England, the weather was disturbed on Sunday by a depression which was dispersing over Germany. At this time it was particularly fine in Ireland, where the previous night had been clear and very sharp—the screened thermometers having fallen to 34° at Parsonstown, 40° at Valentia, and 41° even in Dublin. On Tuesday and Wednesday a vast and deep depression swept across northern Europe in an easterly direction. This disturbance caused heavy rains and strong W. to N.W. gales at several Scandinavian stations. Unsettled weather also spread to Scotland in a less degree. To the extreme south-west of Europe also areas of low atmospheric pressure brought violent thunder and rainstorms in the course of the week. At 8 a.m. of Tuesday the barometer ranged from 30·44 inches in Cork and Kerry to 29·20 inches at Bodö (Norway) and 29·93 inches at Lisbon. In Dublin the mean height of the barometer was 30·438 inches, the extremes being—highest, 30·483 inches at 9 a.m. of Monday (wind, W.), and lowest 30·374 inches at 9 a.m. of Tuesday (wind, W. by N.). The corrected mean temperature was 54·0°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 53·5°. On Sunday and Monday the lowest shade temperature was 41·0°, on Monday the screened thermometers rose to 63·9°. The prevailing wind was northerly, but the air was often calm, leading to the formation of fog. There was no measurable rainfall.

The week ended Saturday, the 22nd, was again a period of fine, quiet, dry, but cloudy, hazy weather. Towards the end of the week signs were not wanting of a break-up of the anticyclonic system which had so long been swaying to and fro over North-western Europe. Sunday was a beautiful day after a cloudy, hazy morning. The sun shone brightly throughout the afternoon, and calms or light variable airs completed the summerlike character of the day. A dull quiet period followed with light to moderate S.E. and E. winds. On Wednesday forenoon some rain fell in Dublin in frequent showers—the measurement was ·039 inch. In the course of the following night ·018 inch of rain fell at Greystones, Co. Wicklow. The barometer was at this time falling fitfully and uniformly, but on Friday the decrease of pressure became more rapid and more serious, as a rain-bearing somewhat complex area of low pressure pushed northwards from the Bay of Biscay. This system caused rain in the English Channel, the S.W. of England, and the S. of Ireland, thunder and lightning occurring at Jersey, and lightning being seen from the Scilly Islands and Prawle Point. On Saturday there was a further extension of broken weather, and the barometer had fallen to 29·60 inches in the Scilly Isles. In Dublin the mean atmospheric pressure was 30·142 inches, the barometer falling gradually from 30·392 inches at 9 a.m. of Sunday (wind, S.E.) to 29·784 inches at 9 p.m. of Saturday (wind, E.). The corrected mean temperature was 56·2°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 55·2°. On Sunday the screened thermometers rose to 61·4°; on Thursday they fell to 49·8° Easterly and northerly winds prevailed. The rainfall was ·069 inch on two days, ·039 inch being registered on Wednesday, and ·030 inch on Saturday.

During the week ended Saturday, the 29th, the weather, although at first dull and damp, was generally favourable. In the S.W., S., and S.E. of England it was very broken until Thursday. These opposite results were due to the appearance of an atmospheric depression over the mouth of the English Channel at the beginning of the week. The system remained almost stationary until Tuesday, when it travelled up the English Channel, arriving at the mouth of the Elbe on Wednesday morning. As the disturbance pursued this east-north-easterly course, it brought E. and N.E. to N. winds, great gloom, and heavy rains to the English districts above mentioned, and also to Holland and North Germany. On Wednesday morning the rain-measurement was ·66 inch at Yarmouth, ·98 inch at the Helder, and 1·05 inch at Cambridge. The primary depression was followed by one or two secondaries, which kept the weather in an unsettled, showery state in the neighbourhood of the English Channel until Thursday. In Ireland, after a gloomy, damp spell, the weather became beautiful—frosty, clear, calm nights giving place to sunny, autumnal days with moderate and bracing easterly winds. On Wednesday night the thermometer in the screen fell to 33° at Parsonstown, and to 34° at Loughborough (Leicestershire). At the latter station the minimum on Thursday night was 30°. Wet snow fell on the morning of this day at Haparanda on the Gulf of Bothnia. A sudden rise of temperature took place in the South of Ireland on Friday. Saturday was fair and bright, and in the evening calm and sharp, with fog in the city. In Dublin the mean height of the barometer was 30·085 inches, pressure ranging from 29·768 inches early on Sunday morning (wind, N.E.) to 30·470 inches at 9 p.m. of Saturday (wind, calm). The corrected mean temperature was

52·0°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 51·4°. On Tuesday the thermometer rose to 58·9° in the shade; on Friday it fell to 39·8°. The rainfall was ·132 inch on three days, ·108 inch being measured on Tuesday. The prevailing winds were N.E. and E.

Sunday, the 30th, was at first calm, with heavy dew and some smoke-fog in Dublin. The weather afterwards became brilliant.

The rainfall in Dublin during the nine months ending September 30th amounted to 22·301 inches on 156 days, compared with 10·968 inches on 112 days during the same period in 1887, 17·992 inches on 131 days in 1888, 19·936 inches on 147 days in 1889, 20·855 inches on 151 days in 1890, 18·020 inches on 135 days in 1891, 19·910 inches on 150 days in 1892, 15·108 inches on 122 days in 1893, and a twenty-five years' average of 19·734 inches on 142·8 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in September, 1894, was ·690 inch, distributed over 6 days. Of this quantity ·300 inch fell on the 7th, and ·230 inch on the 22nd. At that station the rainfall since January 1, 1894, has been 25·896 inches on 137 days, compared with 23·883 inches on 125 days in the same nine months of 1892, and 17·091 inches on 118 days in 1893.

At Cloneevin, Killiney, Co. Dublin, the rainfall in August, 1894, was 4·02 inches on 17 days (the maximal fall in 24 hours being 1·75 inches on the 25th), compared with a nine years' average of 2·794 inches on 15·7 days. In September, 1894, only ·70 inch fell at Cloneevin on 5 days. The maximal fall in 24 hours was ·34 inch on the 7th. On an average of nine years the September rainfall at this station has been 1·622 inches on 12·3 days. Since January 1, 1894, 22·92 inches of rain have fallen at Cloneevin on 150 days.

October.—The first half of the month was quiet, fine, and, for the most part, dry. Some low night temperatures were recorded from time to time at inland stations. Until the 18th very little rain fell—only ·231 inch in Dublin; but from that day onward to the close large quantities of rain were measured almost daily, the precipitation, owing to the prevalence of south-easterly to south-westerly winds, being greatest at the coast stations—Killiney, 6·31 inches; Greystones, 6·105 inches: and least at stations under the lee of the Dublin Mountains—Dublin City, 3·736 inches; Ordnance Survey Office, Phœnix Park, 3·355 inches. The rainfall for the month was 4·01 inches at Balbriggan, 3·960 at Glasnevin Royal Botanic Gardens, and 5·70 inches at Carrickmines. On the 19th and 20th a heavy fall of snow occurred on the Dublin Mountains. On the evening of the latter day a sharp thunderstorm passed over Dublin City and County from the eastward.

In Dublin the arithmetical mean temperature (49·7°) was exactly the average (49·7°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 49·2°. In the twenty-nine years ending with 1893, October was coldest in 1892 (M. T. = 44·8°), in 1880 (M. T. = 45·4°), and in 1885 (M. T. = 45·5°), and warmest in 1876 (M. T. = 53·1°). In 1886, the M. T. was as high as 52·0°; in 1879 (the "cold year"), it was 49·7°; in 1887, it was as low as 47·3°; in 1888, it was 49·1°; in 1889, it was only 48·1°; in 1890, it was 51·7°; in 1891, it was 49·5°; and in 1893, 50·0°. October, 1892, beat the record for coldness.

The mean height of the barometer was 29·881 inches, or 0·041 inch above the corrected average value for October—namely, 29·840 inches. The mercury rose to 30·454 inches at 9 a.m. of the 1st, and fell to 28·591 inches at 4 p.m. of the 24th. The observed range of atmospheric pressure was, therefore, as much as 1·863 inches—that is, a little less than an inch and nine-tenths.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 49·2°, or 3·7° below the value for September. The arithmetical mean of the maximal and minimal readings was 49·7°, compared with a twenty-five years' average of 49·7°. Using the formula, *Mean Temp.* = *Min.* + (*max.*—*min.* × ·485), the value was 49·5°, or exactly equal to the average mean temperature for October, calculated in the same way, in the twenty-five years, 1865-89, inclusive (49·5°). On the 31st, the thermometer in the screen rose to 62·8°—wind, S.S.W.; on the 22nd the temperature fell to 36·0°—wind, E. The minimum on the grass was 28·5°, also on the 22nd. On no night did the thermometer sink to or below 32° in the screen, but on four nights frost occurred on the grass.

The rainfall was 3·967 inches, distributed over 20 days—the rainfall and the rainy days were decidedly above the average. The average rainfall for October in the twenty-five years, 1865–89, inclusive, was 3·106 inches, and the average number of rainy days was 17·6. In 1880 the rainfall in October was very large—7·358 inches on 15 days. In 1875, also, 7·049 inches fell on 26 days. On the other hand, in 1890 only ·639 inch fell on but 11 days, in 1884 only ·834 inch on but 14 days, and in 1868 only ·856 inch on 15 days. In 1888, the rainfall was 1·227 inches on 16 days; in 1889, 4·853 inches fell on 22 days. In 1891, 3·590 inches fell on 13 days; in 1892, 2·535 inches on 17 days; and in 1893, 1·033 inches on 10 days. From these figures it will be seen that October, 1890, proved the driest on record for more than a quarter of a century at least.

There was a thunderstorm on the evening of the 20th. High winds were noted on 9 days, but attained the force of a gale on only one occasion—the 24th. The atmosphere was more or less foggy in Dublin on the 2nd, 3rd, 4th, 8th, 9th 10th, 11th, 12th, and 27th. Hail fell on the 19th and 20th; sleet on the 20th.

Another period of fine, quiet, autumnal weather in Ireland has to be chronicled at the beginning of the month. In the eastern half of Great Britain conditions were less favourable, and slight rain fell upon most days. The weather was first cool and hazy or foggy, then brilliant. On Monday, the 1st, the barometer fell both on the Continent and slightly in Scotland and Ireland, while it rose over England. The weather remained fine and more or less bright until Thursday, when an area of low pressure was found over the south of Germany, whence it spread north-westwards towards England. The depression caused freshening easterly winds, cloudy skies, and finally slight rains in the N.E. and S.E. of England; while heavier rains were reported from the Continental Stations. On the east coast of Ireland also the sky became overcast and rain threatened at times—in Dublin,

however, only a few drops of rain were observed on Friday and a very slight drizzle on Saturday afternoon. In Dublin, the barometer fell gradually from 30·454 inches at 9 a.m. of Monday (wind, S.E.) to 29·998 inches at 9 p.m. of Saturday (wind, E.N.E.). On Tuesday the screened thermometers fell to 40·2°. On Monday they rose to 58·8°. There was no measurable rainfall until the early morning of Sunday, October 7th, when ·011 inch fell. The prevailing winds were S.E., E., and N.E.

Changeable, but warmer, damper and more foggy weather prevailed during the week ended Saturday, the 13th. Atmospheric pressure was still high, but not so high as in the previous week. The central areas of highest barometer lay more to the eastward than before, and thus there was a growing tendency to the substitution of southerly and westerly winds for the easterly and northerly breezes of previous weeks. On Monday and Tuesday the first dense fog of the season settled down over London. The mornings of these days as well as of Wednesday were damp and foggy in Dublin also. On the afternoons of Monday, Tuesday, and Thursday rain fell in close showers. Until Tuesday the nights were cool, but then a rapid advance in temperature took place which was even more marked by night than by day. The minimum in the screen did not fall below 55·1° on the nights of Tuesday and Wednesday, whereas it had been 40·8° on Sunday night. On Wednesday the wind almost "boxed the compass" in Dublin, veering from W. to N., and then through N.E. and E. to S.E. Towards the close of the week, depressions began to pass across Northern Europe from the north-westward, and a return to the northerly weather-type was indicated. In Dublin the mean height of the barometer was 30·125 inches—the lowest reading was 29·997 inches at 9 p.m. of Tuesday (wind, S.S.W.); the highest reading was 30·252 inches at 9 a.m. of Friday (wind, calm). The corrected mean temperature was 54·1°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 53·6°. On Monday the screened thermometers fell to 40·8°; on Friday they rose to 62·7°—the highest reading recorded in Dublin since September 10th. The rainfall amounted to ·210 inch on five days, ·101 inch being measured on Tuesday. The wind was variable.

Cold throughout, the weather of the week ended Saturday, the 20th, was at first fine and dry, but afterwards became dull, damp, and rainy. On Friday and early on Saturday morning large quantities of cold rain, hail, and sleet fell, so that on Saturday the Dublin and Wicklow mountains were snow-capped for the first time this season. On Saturday evening much lightning was seen to the eastward of Dublin, and a thunderstorm with heavy rain passed over the city between 7 and 8.30. p.m. Until Wednesday an anti-cyclone was found over Scotland and Ireland, while a primary depression with its usual secondaries was travelling slowly southwards from the south of Scandinavia to Germany. Polar winds were prevalent all over Western Europe, and the weather was correspondingly cold. At 8 a.m. of Monday the thermometer read 30° at Parsonstown, whereas it was 51° in the Scilly Islands and Jersey. On Wednesday a rather deep depression moved southwards down the Baltic from Lapland and the Gulf of Bothnia. Under its influence cold showers fell very generally along the eastern seaboard of Great Britain. Next day the distribution of pressure became very complex—the barometer began to rise briskly in the extreme north, but fell over Spain, France, and the United Kingdom. The result was the setting in of easterly winds and rain or sleet and hail, a rapid fall of temperature in the north of Europe—to 9° F. at Haparanda at 8 a.m. of Friday—and an equally rapid rise in France and Germany. In Dublin the mean height of the barometer was 30·011 inches, pressure ranging from 30·346 inches at 9 a.m. of Monday (wind, N.) to 29·528 inches at 2.30 p.m. of Saturday (wind, E.). The corrected mean temperature was 45·5°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 44·5°. On Sunday the screened thermometers rose to 56·6°; on Friday they fell to 37·9°. The rainfall was 1·238 inches on the last four days, ·729 inch being referred to Friday. This was the largest measurement of rain recorded in Dublin since August 25th, and was much in excess of the total rainfall for the month of September (·442 inch). The prevailing winds were N.E. and N. Hail fell on Friday, sleet on Saturday, on which day also there was a sharp thunderstorm.

Weather of a cyclonic type was experienced in all parts of western Europe throughout the week ended Saturday, the 27th. Between Tuesday and Friday a barometric depression of the first importance travelled north-eastwards from the S.W. of Ireland across this country, Scotland, and the North Sea, to Sweden. In its passage, gales from various quarters prevailed, rain fell in torrents, and temperature became much higher than it had ruled for several weeks. On Sunday morning, a depression, which had caused thunderstorms during the previous day and night in Ireland, the S.W. of England, and throughout France, was found with its centre over the Wash. Very fine, bright weather prevailed in Ireland on this day and on Monday. The evening of the last-named day was frosty at first, but temperature rose quickly after 9 p.m. in Dublin. In central England, however, sharp frost occurred, lasting until Tuesday morning. Even there the thermometer afterwards rose so quickly that the reading (53°) at 8 a.m. of Wednesday at Loughborough was 27° above that recorded at 8 a.m. of Tuesday (26°). This violent disturbance of temperature accompanied, or was caused by, the very deep atmospheric depression already mentioned, in which the barometer fell to 28·59 inches in Dublin. Scarcely had this system travelled away when another less deep depression advanced from S.W., causing a renewed rainfall and gloomy weather. Lightning was seen in the South of England nightly from Sunday to Friday. On the last day of the week the wind fell calm. In Dublin the mean height of the barometer was only 29·353 inches, the extreme readings being—highest, 29·847 inches at 9 p.m. of Monday (wind, E.); lowest, 28·591 inches at 4 p.m. of Wednesday (wind, calm). The corrected mean temperature was 48·3°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 48·0°. On Wednesday the screened thermometers rose to 57·7°, on Monday they fell to 36·0°. The prevailing winds were—first, E.; then, W. Rain fell on six days to the total amount of 2·011 inches, 1·042 inches being measured on Tuesday.

Atmospheric pressure remained in a most unstable condition throughout the last four days, and copious rainfalls, strong, squally, southerly winds, high but unsteady temperatures, and on Sunday

and Monday electric disturbances made up the weather of the period Most of the depressions observed passed northwards or north-eastwards across the Atlantic, skirting the western coasts of Ireland and Scotland. On Tuesday morning, however, three primary areas of low pressure existed —over Denmark, the North of Scotland, and off the S.W. of Ireland respectively. Connected with these disturbances thunderstorms had prevailed in Wales and the North of England, and in the course of Tuesday torrents of rain fell in the southern half of the British Isles, in Belgium, and the N.E. of France. The measurement at Brixton, in the S. of London, was 1·44 inches. On the same day (Tuesday) there was an extraordinary difference in temperature between Haparanda on the Gulf of Bothnia, where at 8 a.m. the thermometer read—7° Fahr., and Berlin and Valentia Island (Kerry), where the reading at the same time was 51°, or 58° higher. The barometer oscillated between 29·363 inches at 9 a.m. of Monday (wind, S.W.) and 29·743 inches at 9 p.m. of Tuesday (wind, S.E.). The screened thermometers rose to 62·8° on Wednesday, having fallen to 39·1° on Tuesday.

The rainfall in Dublin during the ten months ending October 31st amounted to 26·268 inches on 176 days, compared with 12·366 inches on 123 days during the same period in 1887, 19·219 inches on 147 days in 1888, 24·789 inches on 169 days in 1889, 21·494 inches on 162 days in 1890, 21·610 inches on 148 days in 1891, 22·445 inches on 167 days in 1892, 16·141 inches on 138 days in 1893, and a twenty-five years' average of 22·840 inches on 160·4 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in October amounted to 6·325 inches on 17 days. Of this quantity 2·300 inches fell on the 23rd, and 1·060 inches on the 19th. The rainfall at Greystones in October, 1889, was no less than 6·935 inches on 22 days, or more than 11 times as great as the fall in October, 1890, when only ·600 inch fell on 13 days. In 1891, 5·122 inches fell on 14 days, in 1892, 3·340 inches on 15 days, and in 1893, ·710 inch on 15 days. From January 1st, 1894, up to October 31st, rain fell at Knockdolian on 154 days to the total amount of 32·221 inches. In 1892, the rainfall of the corresponding ten months was 27·223 inches on 140 days; and in 1893, 17·801 inches on 133 days.

At Cloneevin, Killiney, Co. Dublin, the rainfall in October, was 6·460 inches on 17 days, compared with 3·040 inches on 17 days in 1892, ·710 inch on 14 days in 1893, and a nine years' average of 2·924 inches on 15·9 days. The total fall during the first 16 days of October was only ·13 inch. From the 17th to the 31st rain was recorded daily, except on the 22nd. On the 23rd, 1·91 inches fell—the heaviest downpour recorded in 10 years. Since January 1, 1894, 29·38 inches of rain have fallen at this station on 167 days.

November, 1894, proved an open, generally favourable month in the neighbourhood of Dublin. The first half was unsettled, squally, and showery, with a cyclonic type of weather predominant. The second half was mild, quiet, often cloudy and foggy—in a word, the anticylonic type of weather ruled. The rainstorms of the 10th to the 17th were practically unfelt on the east coast of Ireland. Only once in the last thirty years has November been milder than in the present year—that was in 1881, when the mean temperature was as high as 50·3°, or 5·6° above the average, and 2·5 above that of the month now under review.

In Dublin the arithmetical mean temperature (47·8°) was decidedly above the average (44·7°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 46·8°. In the twenty-nine years ending with 1893, November was coldest in 1878 (M. T. = 38·2°), and in 1870 (M. T. = 42·2°), warmest in 1881 (M. T. = 50·3°). In 1886, the M. T. was as high as 46·4°; in the year 1879 (the "cold year") it was 43·9°; in 1887, it was as low as 42·6°; in 1888, it was as high as 47·5°; in 1889, it was 46·4°; in 1890, 45·3°; in 1891, 43·4°; in 1892, as high as 46·9°; and in 1893, 43·8°.

The mean height of the barometer was 29·850 inches, or 0·010 inch below the corrected average value for November—namely, 29·860 inches. The mercury rose to 30·591 inches at 9 a.m. of the 30th, having fallen to 28·904 inches at 2 p.m. of the 14th. The observed range of atmospheric pressure was, therefore, 1·687 inches—that is, slightly less than one inch and seven-tenths.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 46·8°, or 2·4° below the value for October, and 6·1° below that for September, 1894. The arithmetical mean of the maximal and minimal readings was 47·8°, compared with a twenty-five years' average of 44·7°. On the 1st the thermometer in the screen rose to 61·6°—wind, S.S.W.; on the 30th the temperature fell to 34·3°—wind, W.N.W. The minimum on the grass was 27·7°, also on the 30th.

The rainfall was 1·482 inches, distributed over 15 days—the rainfall was considerably below, while the rainy days were also below the average. The average rainfall for November in the twenty-five years, 1865-89, inclusive, was 2·452 inches, and the average number of rainy days was 17·0. In 1876 the rainfall in November was large—3·614 inches on 20 days; in 1872, also, 3·414 inches fell on 24 days; in 1887, 3·012 inches fell on 18 days; in 1888, 6·549 inches fell on 26 days; in 1890, 4·212 inches fell on no less than 27 days; in 1891, 2·911 inches fell on 15 days; in 1892, 2·404 inches on 19 days. On the other hand, the rainfall in 1889 was only ·929 inch on 9 days; in 1870, only 1·218 inches were measured on but 11 days; in 1879, only 1·251 inches on but 10 days; and in 1893, 1·870 inches on 17 days.

High winds were noted on 15 days, but attained the force of a gale on only two occasions—the 5th, and 13th. The atmosphere was more or less foggy in Dublin on the 18th, 23rd, 24th, 26th, 27th, and 30th.

A solar halo was seen on the 4th; lunar halos were seen on the 5th and 11th. Lightning occurred on the night of the 15th, and an aurora borealis on the 23rd. Neither snow nor hail fell.

Atmospheric pressure remained in a shifting, unstable condition throughout the first three days of the month, and copious rains, strong squally southerly winds, and high but unsteady temperatures made up the weather of the period. On Thursday, the 1st, the thermometer rose to 65° in the shade in London, being the highest reading there recorded in November since 1847, when 67°

was reached. In Dublin the maximum on the 1st was 61·6°; that on the 2nd was 60·7°. On Saturday, the 3rd, a storm-centre passed swiftly northwards outside the west coast of Ireland.

The week ended Saturday, the 10th, witnessed a continuance of cyclonic conditions over North-western Europe, resulting in unsettled weather, with squally southerly to westerly winds, frequent rains or passing showers, high but unstable temperature, and fine, bright, dry intervals. Until Thursday, the barometer stood high over France and Germany—30·10 to 30·20 inches—so that gradients were sometimes steep over the British Isles. On the day named a V.-shaped depression existed over the North Sea, and accordingly the wind drew into N.W. over great Britain, while it freshened from S. or S.E. in Norway, Sweden, and Denmark. During the last two days atmospheric pressure became generally low, and was unevenly distributed. In the vicinity of Dublin, alternate cloudy and bright spells occurred, but the weather was not unfavourable save as to its variableness On Wednesday rain fell heavily over the south of England and in Wales in connection with the V-shaped depression already mentioned In Dublin a solar halo was seen at 9 a.m. of Sunday, a lunar halo at 9 p.m. of Monday, and a lunar corona at 9 p.m. of Saturday. Owing to clouds, the Transit of Mercury was not seen from Dublin on the afternoon of Saturday. The mean height of the barometer was 29·647 inches, pressure ranging between 30·038 inches at 9 a.m. of Tuesday (wind, S.W.) and 29·315 inches at 9 p.m. of Saturday (wind, S.W.). The corrected mean temperature was 49·6°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 48·1°. On Tuesday the screened thermometers rose to 57·7°, on Thursday they fell to 41·1°. The rainfall was ·419 inch on six days, ·211 inch being measured on Thursday. The prevailing wind was S.W. Electrical disturbances occurred on Friday night and Saturday in several places.

Very disturbed conditions existed over North-western Europe throughout the week ended Saturday, the 17th, which will be especially memorable for a torrential rainfall in the S.W., S., and S.E. of England, and resulting in destructive floods in those districts. In Scotland, the N.E. of England, and the N. and E. of Ireland, the rainfall was moderate, and intervals of very fine, bright weather were enjoyed. On Sunday rather steep gradients for W. and S.W. winds existed. In the evening a lunar halo and corona of unusual beauty appeared. On Monday morning two atmospheric depressions were found with minima below 29 inches—of these, one was over Caithness, the other was near the Scilly Islands. Round the latter vortex the winds were strong to a gale, and torrents of rain were falling—at 8 a.m. the measurement at St. Mary's, Scilly, was 3·06 inches, and at Hurst Castle 2·02 inches. This system subsequently travelled up the English Channel and then across the North Sea to Denmark. Its passage was attended by violent gales, storms of rain, hail, thunder and lightning. The barometer fell to 28·75 inches at Hurst Castle. On Tuesday another even more extensive depression bore in upon the British Islands, causing a renewal of the rainstorm and gales. Its centre was near the Shetlands at 8 a.m. of Wednesday—the barometer reading at Sumburgh Head being only 28·59 inches. Again, the rainfall was immense over the southern half of England. In Ireland—except in the S. and S.W.—the weather now became very bright and cool, and so remained until Saturday, which was a cloudy, warm, squally day. In Dublin the mean atmospheric pressure was 29·365 inches, the barometer ranging from 28·904 inches at 2 p.m. of Wednesday (wind S.W.) to 29·881 inches at 9 p.m. of Saturday (wind S.) The mean temperature was 45·9°. On Tuesday the screened thermometers fell to 35·7°, on Saturday they rose to 56·9°. The rainfall was ·469 inch, ·399 inch falling on Tuesday. The prevailing winds were S.W. and S. The largest amounts of rain recorded at any individual stations during the week were 6·25 inches at Godmanstone (near Dorchester), 5·51 inches at Scilly, 5·13 inches at Killarney, 4·70 inches at Falmouth, and 4·60 inches (in six days) at Crowborough, Sussex.

"After a storm comes a calm"—this would be a pithy way of comparing the weather of the week ended Saturday, the 24th, with that of its predecessor. The gales and rain ceased, and a growing tendency to anticyclonic conditions showed itself as the period advanced. On Sunday a V-shaped depression lay over Ireland, where rainy but finally quiet weather prevailed. At night the sky was clear, and temperature fell fast, but only for a short time, for on Monday it again became extremely mild. This change was succeeded by a considerable rainfall, amounting to six-tenths of an inch or upwards in the extreme S.W. and N.W. of the country. Bright aurora was reported on Sunday night from Wick in Scotland, and Roche's Point in Cork. The display was again seen on Monday night at Wick; and on Friday night also a brilliant aurora was seen in Ireland, Scotland, and Sweden. On and after Wednesday an anticyclonic band stretched westwards from Central Europe to the southern parts of the British Islands. The wind fell light in consequence, having blown a fresh gale from S.W. in Ireland and the Irish Sea on Wednesday night. The atmosphere also became hazy and thick and fogs formed in many places. On Friday morning the distribution of temperature was most irregular—at 8 a.m. the thermometer read 51° at Holyhead, Pembroke, and Scilly; only 36° at Valentia Island, 34° at Donaghadee, and 33° at Parsonstown. Saturday was a fine day with an easterly breeze. In Dublin the mean height of the barometer was 30·174 inches, pressure ranging from 29·917 inches at 9 a.m. of Sunday (wind, S.S.E.) to 30·387 inches at 9 p.m. of Friday (wind, W.). The mean temperature was 47·4°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was also 47·4°. On Thursday the screened thermometers rose to 56·8°, having fallen to 38·2° during Monday night. The rainfall was ·300 inch on four days, ·150 inch being measured on Sunday. The prevailing winds were S.S.E., S.S.W., and W.

The tendency to anticyclonic conditions observed in Western Europe during the previous week persisted throughout the period from the 25th to the 30th, inclusive, and except in the far North quiet, fine weather prevailed. Temperature was often above the average for the time of year, but local frosts were felt in different parts of the inland districts of our islands, while more decided and extensively distributed frosts occurred in France and Germany. Until Tuesday, the 27th, the area of highest pressure was found over the south of Scandinavia and of the Baltic, in which regions the barometer stood at between 30·70 and 30·80 inches. On the morning of the day named a separate centre of high pressure formed over Ireland, accompanied by a sharp frost inland—the thermometer

receding to 25° at Parsonstown, King's Co. At this time the barometer was falling in the extreme N.W. and N., as a large depression approached Norway from the westward. This disturbance caused a general rise of temperature in the British Islands on Wednesday afternoon, the atmosphere became soft and damp, and the wind freshened with light showers at many stations. As this low pressure area travelled eastwards, the barometer rose again, the wind fell light and drew into northerly points, and temperate gave way quickly. Fog and frost set in on Friday, but the amount of cloud checked radiation to a large extent and only local frosts under clear skies were recorded. In Dublin the extreme readings of the barometer were—highest, 30·591 inches at 9 a.m. of Friday (wind, W.N.W.); lowest, 30·297 inches at 9 a.m. of Sunday (wind, S.E.). On Sunday the screened thermometers rose to 52·3°. On Friday they fell to 34·3°. The prevailing wind was westerly. There was no measurable rainfall.

The rainfall in Dublin during the eleven months ending November 30th amounted to 27·750 inches on 191 days, compared with 15·378 inches on 141 days during the same period in 1887, 25·768 inches on 173 days in 1888, 25·718 inches on 178 days in 1889, 25·706 inches on 189 days in 1890, 24·521 inches on 163 days in 1891, 24·849 inches on 186 days in 1892, only 18·011 inches on but 155 days in 1893, and a twenty-five years' average of 25·292 inches on 177·4 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in November, 1894, was 3·495 inches distributed over 14 days. Of this quantity ·725 of an inch fell on the 13th, and ·795 of an inch on the 17th. From January 1st, 1894, up to November 30th, rain fell at that station on 168 days, and to the total amount of 35·716 inches. The corresponding figures for 1893 were 19·586 inches on 150 days.

At Cloneevin, Killiney, Co. Dublin, 1·58 inches of rain fell on 13 days, compared with a nine years' average of 2·861 inches on 18·11 days. The maximal fall in 24 hours was ·26 inch on the 13th. Since January 1, 1894, 30·96 inches of rain have fallen at this station.

December.—The earlier part of the month was characterised by anticyclonic conditions, and was quiet, chiefly fine, with a good deal of fog. From the 9th onward, the distribution of atmospheric pressure was cyclonic. Gradients were, however, at first slight. Afterwards several depressions of remarkable depth and intensity passed across North-Western Europe—the systems observed on the 22nd and 29th being especially noticeable for the suddenness of their approach, the tempests which accompanied them, and the havoc which they wrought. As in 1893, the month closed with a cold spell, northerly gales bringing falls of sleet, hail and snow to most parts of Western Europe.

In Dublin the arithmetical mean temperature (43·9°) was decidedly above the average (41·3°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 43·0°. In the twenty-nine years ending with 1893, December was coldest in 1878 (M. T. = 32·8°), and in 1874 (M. T. = 36·8°), and warmest in 1865 (M. T. = 46·2°). In 1886 the M. T. was as low as 37·9°; in the year 1879 (the "cold year") it was also 37·9°. In 1887 the M. T. was 39·9°; in 1888 43·6°; in 1889 43·8°; in 1890 39·2°; in 1891, 43·0°; in 1892 39·6°; and in 1893, 43·5°

The mean height of the barometer was 29·980 inches, or 0·105 inch above the corrected average value for December—namely, 29·875 inches. The mercury rose to 30·805 inches at 4 p.m. of the 27th, and fell to 29·144 inches at 11 30 p.m. of the 21st. The observed range of atmospheric pressure was, therefore, 1·661 inches—that is, a little less than one inch and seven-tenths.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 43·0°, or 3·8° below the value for November, and 6·2° below that for October, 1894. Using the formula, *Mean Temp.* = *Min.* + (*max.*—*min.* × ·52), the value was 44·0°, or 2·5° above the average mean temperature for December, calculated in the same way, in the twenty-five years, 1865-89, inclusive (41·5°). The arithmetical mean of the maximal and minimal readings was 43·9°, compared with a twenty-five years' average of 41·3°. On the 13th the thermometer in the screen rose to 56·8°—wind, S.W.; on the 31st the temperature fell to 27·9°—wind, N.W. The minimum on the grass was 22·0° also on the 31st. There were only 3 days of frost in the screen and 15 days of frost on the grass.

The rainfall was 1·511 inches, distributed over as many as 18 days. The average rainfall for December in the twenty-five years, 1865-89, was 2·404 inches, and the average number of rainy days was 16·9. The rainfall, therefore, was considerably below, while the rainy days were above, the average. In 1876 the rainfall in December was very large—7·566 inches on 22 days. In 1872, 4·932 inches fell on as many as 24 days; and in 1868 (which was otherwise a fine and dry year) 4·749 inches fell on as many as 27 days. On the other hand, in 1867, only ·771 inch was measured on 13 days; and in 1871 only ·797 inch on 15 days. In 1885, only ·742 inch of rain was measured on but 10 days, but in 1886 the rainfall was 3·348 inches, distributed over as many as 21 days. In 1887 (the "dry year"), the rainfall was 1·223 inches on 19 days; in 1888, 2·911 inches on 17 days; in 1889, 1·554 inches on 15 days; in 1890, 1·856 inches on 11 days; in 1891, 3·299 inches on 21 days; in 1892, only ·795 inch on 10 days; and in 1893, 2·482 inches on 19 days.

Lunar halos appeared on the 6th, 8th, and 10th; solar halos on the 6th and 8th. High winds were noted on 12 days, and attained the force of a gale on eight occasions—the 9th, 13th, 14th, 18th, 21st, 22nd, 28th, and 29th. The atmosphere was more or less foggy in Dublin on the 1st, 3rd, 4th, 5th, 6th, 8th, 10th, 11th, and 23rd. Snow or sleet fell in Dublin on the 29th and 30th. Hail fell on the 14th, 28th, 29th, and 30th. Lightning occurred on the 30th. Faint aurora was seen on the 22nd.

Saturday, the 1st, was a fine, quiet day—at first cloudy, afterwards foggy.

Although not so settled as in the previous week, the weather during the week ended Saturday, the 8th, was favourable and seasonable. At first an anticyclone still stretched westwards across the British Islands from Germany, but the barometer was, all the same, falling steadily. Light to moderate or fresh S.E. winds prevailed in Ireland, where the weather was fine and dry. Sunday

was a brilliant day in Dublin—a heavy dew fell in the evening. Monday broke overcast, but the sky afterwards cleared and fog and frost occurred at night. On Tuesday a shallow, irregular depression (29·70 inches and less) lay over Brittany and the English Channel. It caused dull misty cold weather, but scarcely any rain fell. On this day the maximal temperature in Dublin was only 38·8°. Wednesday was dull and foggy to fair. On Thursday, much cirrus overspread the sky, causing solar and lunar halos, and the barometer fell as a more decided depression approached from the S.W. At 8 a.m., of Friday the barometer was down to 29·48 inches at Malin Head, and rain was falling in many parts of England and Ireland. By Saturday morning this disturbance had reached the Shetlands and was filling up, while a long trough of low pressure existed over the North Sea. In Ireland the weather was cold, but fine. In England and Scotland, it was taking up after a somewhat heavy rainfall. A solar halo and a lunar halo were again visible on this day. In Dublin the mean height of the barometer was 29·930 inches, pressure ranging from 30·333 inches at 9 a.m. of Sunday (wind, S.E.), to 29·608 inches at 9 a.m. of Friday (wind, S.W.). The corrected mean temperature was 40·2°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 39·0°. On Friday the screened thermometers rose to 51·4°, having fallen to 28·6° on Tuesday. There was again no registrable rainfall—a sprinkling on Thursday yielding only ·003 inch. The prevailing wind was westerly.

Throughout the week ended Saturday, the 15th, a cyclonic distribution of atmospheric pressure and the south-westerly type of weather held over the British Islands and all but the south-eastern part of Scandinavia. Over Central Europe the barometer until Friday stood high within the limits of an anticyclone, and the weather was calm, cold, frosty, and at times foggy—at Munich the 8 a.m. temperatures were—31°, 28°, 21°, 17°, 16°, 22°, and 44°. The corresponding values at Valentia Island (Kerry) were—51°, 54°, 51°, 52°, 55°, 51°, and 48°. During the earlier part of the week a succession of depressions skirted the western shores of Ireland and Scotland, causing squally S. and S.W. winds, much cloud, showers, and high temperatures. On Thursday morning a deep depression struck the N.W. of Scotland, where the barometer read only 29·19 inches (at Stornoway in the Hebrides), while it stood nearly an inch and a quarter higher in the S. of Germany (30·43 inches at Munich). Fresh to strong S.S.W. gales were felt in Ireland, Scotland, and West of Norway. Next morning the barometer read only 28·98 inches at Haparanda on the Gulf of Bothnia, having been down to 28·76 inches at Bodö in Norway the previous evening. On Friday afternoon heavy showers fell, followed by hail squalls at 10 p.m. Saturday was a bright, cold day; but squalls and rain again set in during the course of the evening. In Dublin the mean height of the barometer was 29·876 inches, pressure ranging between 29·563 inches at 6 p.m. of Sunday (wind S.S.W.) and 30·168 inches at 5 p.m. of Saturday (wind, W.). The corrected mean temperature was 48·8°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 48·9°. On Sunday the thermometers fell to 34·9° in the screen; on Thursday they rose to 56·8°. Rain was measured daily, the total amount being 564 inch, of which ·203 inch fell on Friday. The prevailing winds were south-westerly. A very heavy fall of rain occurred over the S.E. of England on Friday.

Atmospheric pressure was in a very unstable condition over Europe at large throughout the week ended Saturday, the 22nd, and the weather was therefore changeable and unsettled. On Sunday morning the barometer ranged from 28·90 inches at Bodö, in the N.W. of Norway, to 30·43 inches at Lyons. In the British Isles moderating north-westerly winds prevailed, and the weather was improving. Soon, however, a new depression appeared over the N. of Scotland, and this developed into a cyclonic disturbance, in the centre of which pressure decreased to less than 28·70 inches on Tuesday evening between the Shetlands and the S.W. of Norway. Gales, from S.W. to N.W., with passing showers of rain and hail and, in some districts, lightning, were reported. On Wednesday night this disturbance travelled south-eastwards to Germany and filled up. On Friday another serious reduction of pressure occurred over the Norwegian Sea and North Atlantic, and towards evening a tempest of wind and rain, with very high temperatures, was felt in Ireland and afterwards extended to all parts of Great Britain. At York the barometer fell from 29·99 inches at 8 a.m. of Friday to 28·72 inches at 8 a.m. of Saturday. From 6 p.m. of Friday to 8 a.m. of Saturday the decrease of pressure at that station amounted to 1·11 inches. At Leith the very low reading of 28·119 inches was recorded early on Saturday morning. As this system passed away, the wind drew into N.W., the air became exceedingly dry and crisp—the relative humidity falling to 60 per cent. in Dublin on Saturday, and temperature fell fast. In Dublin the mean atmospheric pressure of the week was 29·832 inches. The barometer rose to 30·238 inches about 3 p.m. of Thursday (wind, W.), and fell to 29·144 inches at 11·30 p.m. of Friday (wind, S.S.W.). The corrected mean temperature was 46·1°; the mean dry bulb reading at 9 a.m. and 9 p.m. was 44·2°. On Friday and also on Saturday the thermometers in the screen rose to 53·7°, having fallen to 37·0° on Thursday. The prevalent winds were W. and W.S.W. The rainfall was ·414 inch on four days—·187 inch being measured on Monday, and ·159 inch on Friday. Faint aurora was seen on Saturday night.

During the week ended Saturday, the 29th, at first, dull, damp, and mild, the weather afterwards became stormy and colder, with bright intervals. Atmospheric pressure remained in most unstable equilibrium all over Europe, and strange contrasts of anticyclonic and cyclonic conditions presented themselves day after day. Speaking in general terms the barometer ruled low in the far North, high in the central European zone and over the Atlantic to the south-west of the British Islands. On Thursday, at noon, the unusual reading of 30·93 inches was recorded at Valentia Island (Kerry). At 8 a.m. of the same day 28·78 inches was the pressure at Haparanda, on the Gulf of Bothnia. Sunday proved wet in Ireland, owing to the passage eastwards across this country of a V-shaped depression, which filled up subsequently over the North Sea. As this system dispersed, very gloomy, damp, mild weather prevailed. On Christmas Day (Tuesday) the thermometer rose to 55° at Wick, 54° at Nairn and Prawle Point, 53° at Aberdeen, Dublin, Scilly, and Jersey, 52° at many stations, and 50° in London. So warm and dull a Christmas had not occurred for many years. On

Wednesday a large depression spread south-eastwards across Scandinavia, causing severe gales in that region, and strong N.W. winds in Scotland. On Thursday the barometer was exceptionally high in the W. of Ireland (above 30·9 inches), but at night pressure gave way quickly as a new storm-system advanced from the westward. A hard W.S.W. to N.W. gale ensued, followed by a brisk fall of temperature and showers of cold rain, hail, sleet, or snow. In Dublin the mean height of the barometer was 30·243 inches, pressure varying between 30·805 inches at 4 p.m. of Thursday (wind, W.) and 29·505 inches at 9 a.m. of Saturday (wind, N.W. by W.). The reading of the barometer at 4 p.m. of Thursday was the highest recorded in Dublin since January 14, 1891, at 9 p.m. of which day the reading was 30·875 inches. The corrected mean temperature was 44·7°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 43·7°. On Tuesday the screened thermometers rose to 52·6°; on Saturday they fell to 35·3°. The prevailing wind was westerly. Rainfall measured 48·9 inch, ·217 inch being recorded on Sunday. Hail fell on Friday and Saturday; sleet on Saturday.

The last two days of the month were very cold, and snow lay on the ground to the depth of an inch in and around Dublin. Snow and hail fell on the afternoon of Sunday, the 30th, and lightning was seen in the evening.

The rainfall in Dublin during the year ending December 31st amounted to 29·261 inches on 209 days, compared with only 20·493 inches on 174 days in 1893, 25·644 inches on 196 days in 1892, 27·820 inches on 184 days in 1891, 27·562 inches on 200 days in 1890, 27·272 inches on 193 days in 1889, 28·679 inches on 190 days in 1888, 16·601 inches on 160 days in 1887, and a twenty-five years' average of 27·696 inches on 194·3 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in December, 1894, was 3·060 inches, distributed over 16 days. Of this quantity ·580 inch fell on the 9th, and ·490 inch on the 11th. From January 1st to December 31st, 1894, rain fell at Knockdolian on 184 days, and to the total amount of 38·776 inches. The corresponding figures for 1893 were 22·526 inches on 170 days.

The rainfall at Cloneevin, Killiney, Co. Dublin, during December, 1894, was 1·68 inches on 16 days, compared with a nine years' average (1885–93) of 2·108 inches on 15·6 days. The maximum fall in 24 hours was ·40 inch on the 9th. Mr. Robert O'Brien Furlong, M.A., Univ. Dub., reports that the total fall for 1894 at Cloneevin was 32·64 inches on 196 days. This was 7·95 inches in excess of the 9 years' average—viz., 24·69 inches, and is the highest recorded for 10 years—1885–94. The next highest annual fall was 32·42 inches in 1886. In 1894 rain (including snow) fell on 196 days, the average being 175 days. In 1886 rain fell on 195 days.

The greatest fall in 24 hours was 1·91 inches on October 23rd. The greatest fall hitherto recorded was 1·84 inches on November 10th, 1891.

The rainfall of October was phenomenal. During the first 16 days the fall was only ·13 inch on 3 days. From the 17th to the 31st rain fell every day except the 22nd.

Thunderstorms occurred on July 25 (12·30 a.m. to 3 a.m. on the 26th). Severe gales prevailed on December 21 (S.W. to N.W.) and October 24 (S.E. to S.W.).

Snow fell on 9 days—Jan. 5, 6, 27, 30, and 31; March 12 and 13; December 29 and 30.

For Remarks on the Rainfall in 1894 *and Abstracts of Meteorological Observations,* 1874–94, *see pages* 186–190.

MARRIAGES, BIRTHS, and **DEATHS** *registered* in the Year 1894.

I.—PROVINCE OF LEINSTER.—MARRIAGES, BIRTHS, AND DEATHS, 1894.

SUPERINTENDENT REGISTRARS' DISTRICTS, ARRANGED BY COUNTIES.*

Wherever the minus sign (—) is prefixed to the number given in the column headed "Excess of Births over Deaths," it denotes that the births, instead of exceeding the deaths, were, in fact, *less than the Deaths* to the extent stated.

No.	SUPERINTENDENT REGISTRARS' DISTRICTS.	Area in Statute Acres.	Population, 1891.	TOTAL			BIRTHS.				DEATHS.		Excess of Births over Deaths.

NOTE.—The Registrars' Districts are subdivisions of the Unions or Superintendent Registrars' Districts, and are identical with the Dispensary Districts of the same names, except in a few instances.

The letter *W.* denotes that the Registrar's District contains within its limits the Workhouse belonging to the Union or Superintendent Registrar's District.

Wherever the minus sign (—) is prefixed to the numbers given in the column headed "Excess of Births over Deaths," it denotes that the births, instead of exceeding the deaths, were, in fact, *less than the deaths* to the extent stated.

BIRTHS AND DEATHS Registered in the Year 1894—REGISTRARS' DISTRICTS, arranged by COUNTIES and SUPERINTENDENT REGISTRARS' DISTRICTS—*continued.*

The rainfall was 1·565 inches in excess of the average annual measurement of the twenty-five years, 1865–89, inclusive—viz., 27·696 inches.

It will be remembered that the rainfall in 1887 was very exceptionally small—16·601 inches, the only approach to this measurement in Dublin being in 1870, when only 20·859 inches fell, in 1884, when the measurement was 20·467 inches, and in 1893 with its rainfall of 20·493 inches. In seven of the twenty-five years in question the rainfall was less than 26 inches, and in 1885 it was 26·614 inches.

The scanty rainfall in 1887 was in marked contrast to the abundant downpour in 1886, when 32·966 inches—or as nearly as possible double the fall of 1887—fell on 220 days. Only twice since these records commenced has the rainfall in Dublin exceeded that of 1886—namely, in 1872, when 35·566 inches fell on 238 days, and in 1880, when 34·512 inches were measured on, however, only 188 days.

In 1894, there were 209 rainy days, or days upon which not less than ·005 inch of rain (five thousandths of an inch) was measured. This was considerably in excess of the average number of rainy days, which was 194·3 in the twenty-five years, 1865–89, inclusive. In 1868 and 1887—the warm dry years of recent times—the rainy days were only 160, and in 1870 they were only 145. In 1868, however, the rainfall amounted to 24·935 inches, or more than 8 inches above the measurement in 1887, and even in 1870, 20·859 inches were recorded.

The rainfall in 24 hours from 9 a.m. to 9 a.m. exceeded one inch on two occasions in 1892—viz., May 28th (2·056 inches), and August 16th (1·310 inches). On no occasion in 1893 did one inch of rain fall on a given day in Dublin, the maximal daily measurements were ·871 inch on July 12th, and ·821 inch on November 16th. In 1894, falls of upwards of an inch of rain in 24 hours were recorded on four occasions, viz., May 15th (1·330 inches); July 24th (1·560 inches); August 25th (1·369 inches); and October 23rd (1·042 inches).

Included in the 209 rainy days in 1894 are 16 on which snow or sleet fell, and 32 on which there was hail. In January hail was observed on 7 days, in February on 4 days, in March on 5 days, in April, June, and October on 2 days, in May on 3 days, in July, August, and September on one day, and on 4 days in December. Snow or sleet fell on 7 days in January, on 2 days in February, on 3 days in March, on 1 day in May and in October, and on 2 days in December. Thunder occurred on 11 occasions during the year—three times in May, six times in July, and once in August and October. Lightning was also seen on three occasions in July, and once in January, February, September, November and December.

The rainfall was distributed as follows:—6·028 inches fell on 53 days in the first quarter, 8·333 inches on 56 days in the second, 7·940 inches on 47 days in the third, and 6·960 inches on 53 days in the fourth and last quarter.

The rainfall in the first six months was 14·361 inches, on 109 days—that is, not quite one-half of the year's record. The rainfall exceeded 3 inches in April (3·123), May (3·558), July (3·772), August (3·726), and October (3·967). In September it was only ·442 inch on 8 days.

Of the 6·960 inches which fell in the fourth quarter of the year, 3·967 inches were measured in October on 20 days, and 1·482 inches in November on 15 days, and 1·511 inches in December on 18 days.

Aurora borealis was observed on six occasions—namely, on February 23rd and 25th, March 30th, April 5th, November 23rd, and December 22nd. More or less fog prevailed on 64 occasions—3 in January, 8 in February, 10 in March, 8 in April, 3 in May and June, 5 in September, 9 in October, 6 in November, and 9 in December. High winds were noted on 131 days—21 in January, 17 in February, 12 in March, 5 in April, 11 in May, 8 in June, 7 in July, 13 in August, only 2 in September, 8 in October, 15 in November, and 12 in December. The high winds amounted to gales (force 7 or upwards according to the Beaufort scale) on 39 occasions—9 in January, 8 in February, 4 in March, 2 in April, 1 in May, June, and July, respectively; 2 in August, 1 in October, 2 in November, and 8 in December.

NOTE.—The mean pressures shown in the above Table have been given corrected for instrumental error and reduced to 32° Fahrenheit, but not reduced to mean sea level. If it be desired for any purpose to reduce them to the normal, the approximate correction for the purpose (varying within slight limits with the pressure and the temperature) is:—+ ·058.

NOTE.—This Table has been constructed for the years 1820 to 1831—By adopting the rates of increase of the male and female population between 1821 and 1831, as shown by the Irish Census Reports of 1831—the first complete Census of Ireland having been taken in 1821.

1832 to 1841—By adopting the rate of increase between the population of 1831 and 1841 according to the Irish Census Report of 1841.

1842 to 1846—By taking the English average birth-rate of 1 in 31, and death-rate of 1 in 45, and deducting the annual emigration from Ireland according to the returns received from the Emigration Commissioners in England.

1847 to 1851—The English birth-rate, as above, was used, deducting the number of deaths and the number of emigrants in each year, as given in the Irish Census Reports of 1851; an allowance, proportioned to the number of recorded deaths and the number of emigrants being made in each year for the excess of the number thus arrived at for 1851 over the actual population according to the Census of that year.

1852 to 1871—The English birth and death rates, as above, were used, deducting the number of emigrants according to the returns obtained by the Registrar-General for Ireland, and allowing for excess over Census numbers for 1861 and 1871 as explained for the last period.

1872-94—By adding the Births registered in each year to the estimated population for the previous year, deducting the deaths and the number of emigrants, and adjusting the results for the years 1872-81 and 1882-91 to allow for the discrepancy between the number thus arrived at for 1881 and 1891 respectively, and the population as shown by the Census in each of these years.

AGES of the POPULATION in IRELAND according to the Census Returns of 1861, 1871, 1881, and 1891.

Periods.	Sexes.	Ages—Years.														Total.
		Under 1.	1 and under 5.	5 and under 10.	10 and under 15.	15 and under 20.	20 and under 25.	25 and under 35.	35 and under 45.	45 and under 55.	55 and under 65.	65 and under 75.	75 and under 85.	85 and under 95.	95 and upwards.

REPORT on the ADMINISTRATION of the LEGAL WORK of the GENERAL REGISTER OFFICE, DUBLIN, for the Financial Year 1894–95.

SIR,—I beg to submit the following observations regarding the legal work of your Department during the year 1894–95:—

The total number of offences against the Registration Acts which were reported by Local Officers, and came under investigation in this Department during the year, amounted to 774. As regards many of these, the defaulters came forward and complied with the requirements of the law, on becoming aware that proceedings against them were in contemplation, and in a large number of cases it was found that no proceedings could be taken against the responsible parties, as the legal time for doing so had elapsed.

However, after careful inquiry into the circumstances of each case, and an examination of the evidence available, prosecutions were directed against the offenders in 173 cases. In 94 of these the parties were convicted and punished; in 66 cases the proceedings were abandoned, the parties (in most cases) paying the costs of court and complying with the law; and in 8 cases the summonses were dismissed, while in 5 cases the result has not as yet been reported to this Office.

Among the offences dealt with were the following:—Neglect to register births; neglect to register deaths; neglect to furnish certificates of marriage; failure of Coroner to furnish certificate of inquest; giving false information as to age at death, as to the cause of death, and as to duration of illness previous to death; giving false information as to births, viz., registering illegitimate children as legitimate, and misrepresenting date of birth; neglect of Medical Practitioner to furnish certificate of cause of death; neglect to furnish Burial Notifications.

The following are a few examples of these cases:—

J. W. was prosecuted at Ballinrobe Petty Sessions for neglecting to register the birth of his child. He was convicted and fined 10*s.* and costs.

L. R. was prosecuted at the Metropolitan Police Courts for neglecting to register the birth of her child. She was convicted and fined £1.

J. B. was prosecuted at Churchhill Petty Sessions for neglecting to register his father's death. He was convicted and fined £1 1*s.*, and ordered to comply with the Act.

E. S. was prosecuted at Trim Petty Sessions for neglecting to register the death of his sister. He was convicted and fined 10*s.* and costs.

E. N. was prosecuted at Arklow Petty Sessions for giving false information when registering a death, by wilfully understating the age of deceased for fraudulent purposes connected with an insurance on his life. He was convicted and fined £2 with costs, or one month's imprisonment.

J. M. was prosecuted at Belfast Police Court for giving false information when registering the death of his wife. He was convicted and fined £4 with 20*s.* costs.

J. B. was prosecuted at Monasterevan Petty Sessions for registering a death which did not take place. He was convicted and fined 40*s.* with costs, or one month's imprisonment.

M. G. was prosecuted at Belfast Police Court for registering an illegitimate birth as legitimate. She was convicted and fined 10*s.* with 12*s.* 6*d.* costs.

M. H. was prosecuted at Tramore Petty Sessions for registering the birth of her illegitimate child as legitimate. She was convicted and fined £2 10*s.*

It is to be regretted that, despite the vigorous measures adopted by the Department for the punishment of offenders, several Registrars report that they believe false information is frequently given to them, especially in cases of deaths.

The *modus operandi* in one class of offences appears to be as follows: when a member of a family is entered in a Friendly Society or Industrial Assurance Company, the age is frequently given as much below the real age in order to reduce the amount of the premium payable. After a time the person dies, and then the registry is effected so as to suit the statements previously made to the Society or Company.

However, it sometimes happens that the informant overlooks the fact that the age in the register should correspond with the age in the policy, and, in order to obtain the money, another criminal act is then necessary, namely, making a declaration before a magistrate, altering the age correctly given in the register to an incorrect age, to agree with the age in the policy.

Although the greatest pains have been taken to obtain evidence in these cases to convict the offenders, I regret to state, that on many occasions the proceedings had to be abandoned for want of documentary proof of age, though no reasonable doubt existed that the offence had been committed.

In several cases the age of a deceased person has been successfully proved from a marriage register, giving the age at time of marriage, and in other cases the age inserted or proposed to be inserted in the register, has been proved to be impossible from the records of the births or baptisms of the children of the deceased; but of course, as a rule, the absence of reliable records of birth or baptism of old persons, makes it exceedingly difficult to deal with cases affecting them.

In addition to the above mentioned, there were a number of cases during the year in which proceedings were taken under the 26 & 27 Vic., cap. 90, before the magistrates at Petty Sessions for corrections in marriage registers, the summonses in these cases being issued at the instance of local Registration Officers.

A sum of £130 was provided in the estimate to meet legal charges. The total cost of the legal service of the Department during the year was £118 8*s*., of which sum £82 was paid for local professional assistance, and £23 14*s*. for mileage to the Registrars.

I should add that the Department is greatly indebted to the Inspector-General of the Royal Irish Constabulary and the Chief Commissioner of Metropolitan Police for their kind assistance in investigating the numerous and varied criminal cases I have referred to.

I am, Sir,

Your obedient servant,

R. E. Matheson,
Barrister-at-Law.

Thomas W. Grimshaw, Esq., M.D,
Registrar-General.

DUBLIN CASTLE,

20th July, 1895.

SIR,

I have to acknowledge the receipt of your letter of the 18th instant, forwarding, for submission to His Excellency the Lord Lieutenant, the Annual Report on the Marriages, Births, and Deaths registered in Ireland during the Year 1894.

I am,

Sir,

Your obedient servant,

D. HARREL.

The Registrar-General,

Charlemont House,

Rutland Square.
